

Concrete Staining Birmingham Firm Provides Unique Designs For Floors, Patios And Driveways

May 02, 2017

May 02, 2017 -

Concrete Art Creations of Alabama offers concrete staining Birmingham professional techniques and products to area residents. The firm provides customers with remarkable, uniquely engraved and beautifully stained floors.

Birmingham AL: Concrete Art Creations of Alabama and Ronnie Page are pleased to announce that the concrete staining Birmingham firm has the knowledge and experience to complete a range of unique floor concepts and products based on concrete staining. The floor designs include curves, geometric shapes or uniquely different floral patterns. Driveways featuring an engraved design and stains are a way to add dramatic flair to the home. In addition to staining, driveways can feature brick or stone accents.

According to Ronnie Page of Concrete Art Creations, "Your home and entryway can stand out from everyone else in the neighborhood by having the concrete driveway engraved with a cool design and stained. We can take your plain, dull, boring concrete; and give it a face lift like no other. There are so many possibilities and options available today. Some favorite elements which we can incorporate into driveway designs include tile patterns, straight or diamond shapes engraved. Other clients go with flagstone, cobblestone or brick patterns."

Acid staining allows for many colors from which to choose. Acid staining ensures that every concrete drive will look different. Homeowners can add a personal touch to the driveway, as well as many different color combinations and choices. The driveway can be complemented by the appearance of walkways leading to the house.

Two types of concrete staining are available: acid stain and water-based acrylic stain. Acid stain is a reactive coloring process which reacts differently to different parts of the concrete. Water-based acrylic stains have more color options and can be used indoors or outdoors. Exterior applications with water-based acrylic stains are less durable than acid staining, but there are more colors available. A good sealer must be used and a re-sealer maintenance plan implemented.

Staining pool surrounds adds interest and color to otherwise boring expanses. Entertaining around the pool and patio is more fun with the addition of color and design.
