

HealthRadioRX Names Dr. Dwain Morris-Irvin As Its Director of Scientific Research and Development

June 28, 2017

June 28, 2017 - PRESSADVANTAGE -

Chicago, IL (June 28, 2017) HealthRadioRX, producer of superior quality, research backed skin care products and health supplements, is pleased to introduce as its Director of Scientific Research and Development, Dr. Dwain Morris-Irvin, one of the top stem cell scientists in the world. Dr. Morris-Irvin's considerable academic and professional accomplishments include a PhD in Molecular & Medical Pharmacology and Developmental Neuroscience from UCLA School of Medicine, a Masters of Public Health from UCLA School of Public Health, Environmental Health Sciences as well as post-doctoral training at The Wallenberg Neuroscience Center at Lund University in Sweden.

His research focused on neural development as well as neural stem cell fate and differentiation, with research projects including the potential role of cell replacement therapy and adaptive immunity for patients with Parkinson's disease. Plus, he also developed two patents in the area of immunotherapy for brain tumor patients, specifically Glioblastoma Multiforme (GBM).

Dr. Morris-Irvin has also worked closely with world renowned cosmetic scientist Dr. Ron DiSalvo, known for his work in building the Redken Laboratories, as well as developing many of the well known high end products for Paul Mitchell, Lancome and others.

“We are honored and delighted to have Dr. Morris-Irvin join us, as he brings a wealth of scientific knowledge as well as his revolutionary, science backed skin care formulas that will greatly benefit our customers for many years to come,” says HealthRadioRX President and CEO Troy Warren.

Dr. Morris-Irvin’s expertise in the field of stem cell technology led him to develop a signaling complex based on the understanding that the stem cells which generate skin cells could be stimulated to repair and rejuvenate damaged skin.

He was then able to incorporate this signaling complex into a line of potent anti-aging skin formulas which actually signal the skin’s own stem cells to bring about the most visible anti-aging results. He combined this powerful stem cell signaling system with a special liposomal based carrier system which ensures the formula is delivered deep into the epidermis (the outermost skin layer) not just on the very surface of the skin, to ensure delivery of the signals to the right target.

Dr. Morris-Irvin is passionate about changing the way people look at and use cosmetics. He sums up his skincare philosophy this way, “We treat skin both from the outside-in and the inside-out, as nutritional support is vitally important to skin health. Our products, including both topical and nutritional, work to improve the overall health of your skin.”

All of HealthRadioRX’s skin care and health supplement products are available online at www.HealthRadioRX.com or call 800-970-5827 for more information.

HealthRadioRX produces superior quality, research backed skin care products and health supplements. Our mission is to deliver the finest health supplements and anti-aging products that support health and enhance beauty.
