

Exous Bodygear Announces New Low Profile Knee Brace For Skiing

June 18, 2015

June 18, 2015 - PRESSADVANTAGE -

EXOUS Bodygear, an athletic equipment company, has announced that they have just released a new low profile knee brace offering skiers the support they need without heavy duty equipment. The brace is designed using lightweight materials that form to the knee to allow for safe and comfortable movement without distressing the patella or muscle tissue beneath the brace.

Unlike other knee braces for skiing, the EXOUS brace weighs only 175 g, but still offers double lateral stabilizers and four way compression. Although the company agrees that competitors may offer similar features, they have suggested that consumers will have a difficult time finding a knee brace that delivers these advantages without being bulky, heavy, and uncomfortable on the knee. The company has said the following regarding the brace and its usefulness in the world of athletics:

"The Ex-701 is ideal for sports that require good lateral stabilization because of the double lateral springs and the 4 way compression the user will get much more advanced bracing and can customize the level of support especially around the patella area, will be ideal for the following sports: skiing, basketball, running, American football, soccer, gym, cross fit."

EXOUS's Ex-701 knee brace for skiing helps to isolate and track the patella tendon while still offering users the customizability options they so need for different sizes of legs and knees. The device was created using 3mm high grade neoprene, with a skin friendly inner liner made from Jaquard Lycra to reduce skin rash and irritation. It's key feature is the innovative strap system that differs from many competitors, and EXOUS has said this regarding the design:

"The EX-701 has a rather unique 4-way compression system that is designed differently from other brands and products in the market. Many of the top sellers such as the top listings on amazon are based around what is known as a '3 strap design' where there are 2 large straps on the top and bottom of the support and smaller middle strap which wraps around behind the knee, this 3 strap design has inherent problems which are often highlighted from consumer's who review the products, it was important we made something that offered something different and in our opinion better."

For those who are interested in purchasing the ski knee brace, the company invites customers to visit them at their Facebook page, Amazon page, or website, for information on the brace, and to see what other shoppers have to say about their interaction with the protective tool. The site offers a look at other products offered by EXOUS, while their Amazon sales page provides easy access to purchase the knee brace, which is currently offered on the site for a special price of £11.99.

Visiting the company blog or Facebook page is reported to offer interesting articles, useful information on the ski brace, and listed upcoming promotions for customers to take advantage of. It also supplies a variety of photos of the brace, and gives new users the ability to leave feedback or reviews on the product. The EXOUS Amazon.com sales page also offers this option, and the company encourages testimonials and reviews from those who have enjoyed the brace and want to share their experience.
