Wireless Me Announces Launch Of New Bluetooth Sport Earbuds

August 21, 2017

August 21, 2017 - PRESSADVANTAGE -

Valley Cottage, New York based Wireless Me has announced the launch of its newest product, which is a set of Bluetooth headphones. The company points out that the headphones provide the highest quality of stereo sound, while using Bluetooth technology.

John Kennedy from Wireless Me says, "When you are running or engaging in any type of sport, you want headphones that you can rely on to keep working. These are of very high quality and offer great sound thanks to their noise cancelling feature."

The Bluetooth sport earbuds are available on the Amazon website and they are adjustable to fit any ear size, so the company states that they can be used by children as well as adults of all sizes and shapes. They allow for activity and movement without the user having to worry that the earpiece might fall off, just like with over the ear versions of the headset. The earbuds are developed with the latest Bluetooth 4.1 standards and manufactured with a British CSR 8624 chip that helps to deliver premium sound and the noise cancelling feature.

"The technology is what makes them great," says Kennedy. "They protect your hearing by drowning out background noise, so you don't have to turn up the volume as loud to hear your music or whatever it is that you are listening to."

Kennedy states that the noise cancelling technology of the earbuds blocks out all distracting outside noises, enables wearers to leave the volume at a safe level and still experience optimal sound. He points out that many headset enabled devices today carry a warning with regards to volume at high levels when headphones are being used, stating that listening to music or other sounds at a high volume can damage hearing.

In addition to the Bluetooth and noise cancelling technology, the adjustable Bluetooth sport headphones also include a carrying case that help to protect the earbuds when they are not being used. The company declares that these are the last earphones users will ever need and offer a return policy for those who are not completely satisfied. Those interested in learning more about the earphones can find them on the Amazon website.

Wireless Me

Wireless Me was formed by electronics engineers tired of big brands over charging for middle of the road technology. We use premium chips, electronic interfaces, and programming, to produce a top end of the market sound at a much lower price.
