July 22, 2015 - PRESSADVANTAGE -

Canadian company MathFileFolderGames.com has announced that they intend to bring humor into the classroom through their math jokes for kids book. The company believes that by introducing this unique take on mathematics, children at any stage of learning can relieve their anxieties related to math and build confidence and interest in the subject. Company representative Justin Holladay says, "Research shows that besides making a class more fun and interesting, humor also improves students' test grades. The higher the level of mathematics, the more fun a class can be, since getting the humor requires an understanding of the math involved."

By supplying the best math jokes to the public through their website online, MathFileFolderGames.com hopes to become an integral part of every classroom. The site also offers additional resources and fun with the announcement of their printable bookmarks, and easy to display PPT slides for projector use in schools, both of which are also included with the book.

One suggestion that the company makes in regards to the use of the book is that teachers consider using a math joke of the day. This has the ability to brighten the time that students spend in the classroom, especially

for those who have difficulty with math. The joke of the day concept will be easy to implement as MathFileFolderGames.com supplies 99 different jokes that teachers can choose from.

The book is designed with a format that breaks the jokes down into two sections. Part one includes 43 jokes, while part two offers 56 jokes. All of the jokes, along with additional materials can be purchased on TPT for \$3.00. The bookmarks included in the package provide teachers and parents with each math joke in bookmark form for students and children to continue laughing even after a math lesson has ended.

"Love this. Made my students laugh and question what the other ones mean. Great job." - Noreen J.

Formats included with the book are printable PDF, PPT slides, and JPEG files, which can be used as handouts, worksheets, or as an addition to a classroom bulletin board. Currently, the book holds a high rating online, and consumers can view these ratings and customer comments by visiting www.MathFileFolderGames.Com.
