

TemperaturePro Minneapolis Publishes Post To Help People Address Common Furnace Problems

November 15, 2017

November 15, 2017 - PRESSADVANTAGE -

TemperaturePro SW Minneapolis Heating & Cooling, which is a 5 Star rated HVAC company in Minneapolis, Minnesota, also serves as a source of advice, information, and guidance for homeowners and residents on heating and cooling problems. They have shared that they have recently published a blog post that provides a number of important furnace tips to help people better understand the usual problems with furnaces and when these might need some kind of repair.

John Gerken from TemperaturePro SW Minneapolis Heating & Cooling says: "You might not realize this, but about half of the homes in the United States utilize natural gas-fired furnaces for heating. It's not uncommon to find units over 20 years old still on the job because a gas furnace is a sturdy appliance with a long expected service life. Costs of brand new heating systems by established manufacturers have stayed relatively low and the installation simple due to its long history and mass production."

The new post lists the 10 most common problems that can be encountered with furnaces. These are neglected maintenance, increasing operating costs, poor heating performance, ignition problems, a defective thermostat, strange noises, furnace 'short cycles', furnaces being the improper size, having some rooms too

cold and others too hot, and a defective heat exchanger. The company warns that the vast majority of these problems are not to be resolved through a DIY job.

"Furnace problems may occur at any point," adds John Gerken. "Some are simple, some are difficult, and some are indications that it is time to upgrade to a new furnace, ASAP."

With the blog post, the company wants to ensure that people are better at understanding the efficiency rating of furnaces and boilers. This is a significant factor in helping energy bills go down. So much so, in fact, that people may see a return on investment on the cost of purchasing a new furnace, so long as they choose an efficient model.

The company aims to set itself apart as a trustworthy, go-to expert on all things relating to furnaces and other HVAC appliances. Whether people have a defective thermostat or a more serious problem, they are ready to come take a look at it and provide information on the next steps to take.
