

Meat Machine Cycles Offers Friday Harbor E Bike Rentals

January 18, 2018

January 18, 2018 -

Meat Machine Cycles is proud to announce that they are now the only bike shop in Friday Harbor, WA, that offers e-bike rentals. Full details of their unique offerings and services can be found on their website at <https://www.meatmachinebicycles.com/rentals/>. The company explained that they offer e-bike rentals because it is a popular modern form of transportation.

Seth Cox, owner of Meat Machine Cycles, says: "We believe in giving power to the people. Get fitter. Go Further. Keep up with faster riders, and effortlessly tour the islands without the noise of a motorized vehicle. With their sportive position, lightweight, efficient movements, our state-of-the-art e-bikes are sized for all and equipped for an hour or two, or an extended vacation."

All e-bikes offered for rental by the bike shop have been designed to provide people with confident handling. They feel stable and reassuring and the rider position balances upright comfort and sporty efficiency. Indeed, many people have reported that the Quick NEO is a lot of fun to ride. Indeed, the shop is known not just for

its fantastic bikes and riding experience, but also for its knowledge and fantastic customer service. Joshua H., for instance, says on the company's Facebook page at <https://www.facebook.com/meatmachinecycles/>: "Seth provided excellent customer service by keeping the shop open late so I could purchase some riding gear (forgot it back on the other side of the water). Seth was very knowledgeable, friendly and had great customer service. I highly recommend this shop."

One of the reasons why Meat Machine Cycles decided to add the e-bike to their offering of rentals is because of its smart sizing. Seth explains: "Quick NEO frames have a new geometry that features an easier reach to the bars and consistent jumps in stack and reach across all sizes, for easy fitting."

Photographs of the e-bikes, other bikes, and routes clients have taken have been posted on the company's Instagram page at <https://www.instagram.com/mmcycle/>. This clearly shows the e-bike's integrated power thanks to the Shimano STEPS E6000 Drive unit. This unit ensures that the ride is smooth and natural, while having more than enough power to handle the quiet, lightweight running system of the bike.
