Merchanture Adds A Premium Door Stopper To Their Expanding Lineup

July 10, 2015

July 10, 2015 -

As an established manufacturer of several other products, Merchanture of Santa Clarita, California has recently announced the addition of a pack of 2 Heavy Duty Brown Rubber Wedges to its line of products. The announcement has been supplemented with a lucrative offer of a 57% reduction on its listed price making it an attractive bargain to take advantage of. In addition to the price offer, the company is offering 2 spring door stoppers included in the price for the rubber door wedges. However, this offer is said to be limited stock available for this special promotional price.

Several customers have already taken advantage of the introductory price offered by Merchanture while responding with positive feedback. The UberTuff Door Stoppers have been promoted on the basis of their construction quality and design innovation. Door Stoppers are useful in their simplistic and convenient function, employing just the use of a foot to guide it. Whether it is meant to keep a door open or closed, many manufacturers selling their respective products on Amazon are seen offering door stoppers made from plastic. This results in a door stopper that is prone to slipping on smooth surfaces like wood and laminate floors. Hard plastic door stoppers are also at risk of developing cracks due to rough use or placing under a heavy door.

The UberTuff Door Stopper, however, is made from heavy duty rubber, making it durable for using indoors as well as outdoors. Since the material of the rubber door wedge is adaptable to different door sizes and heights, it makes for an easy choice for a customer who is looking for a product that is a suitable fit for their door. The design of Merchanture's door stopper also facilitates its function; it can therefore, be used on a number of different surfaces. The underside of the stopper has tiny teeth for maximizing friction and grip to the floor surface, irrespective of type. The top of the stopper has grooves built into the surface, thus reducing the chance for the door slipping off it.

Merchanture's promotional offer pack is available with 2 door stopping springs. These springs have screws built into them and make for an easy do it yourself job to set them up. The spring protects the wall behind the door by stopping the door handle from slamming into it. The spring ends with a small plastic bumper which helps absorb the impact. Since these springs are on offer with the same set, customers can expect similar reliability and durability as offered by the UberTuff Door Stopper.

Merchanture prides itself in providing logical, durable and innovative solutions to its customers. With a rapidly increasing customer base, they maintain being committed to their product satisfaction as a testament to their values.
