

## **Place Value Games And Other Materials Released For Back To School Preparation By MathFileFolderGames.com**

*July 14, 2015*

July 14, 2015 - PRESSADVANTAGE -

MathFileFolderGames.com, an educational business in Magrath, AB, Canada, has just released Place Value Games & Place Value Activities for teachers who are preparing their back to school materials. With the summer vacation quickly ending, getting ready for the new year is something many teachers are working on. MathFileFolderGames.com hopes to help educators ensure next year will be both fun and successful.

Justin Holladay from MathFileFolderGames.com says, "All teachers know that learning through play is the best way for students to get to grips with new information. Our place value games and place value activities are targeted at children in second to sixth grade, helping them to grasp the idea of place value in an educational yet fun manner."

The set includes 28 different games and activities that help students better understand the concept of place value. The materials can be downloaded and used by teachers and home schooling parents alike. One of the materials is the Place Value Chart, which helps students grasp the power of 10 in an easy to understand manner, as well as introducing them to the concept of place value.

"All of our tools are fully downloadable," adds Justin Holladay. "The Decimal Place Value Chart, for instance, comes with a board sized poster, and a bookmark 'cheat sheet' that students can use. These can be glued into student's math journals, for instance, so they always have an easy reference guide with them."

These Place Value Anchor Charts and Place Value Games/Activities are equally valuable to students and educators alike, and helps the student to master the power of ten and to introduce place value. This is a tool that can be used all year long, as place value is important throughout all elements of math.

All the tools delivered by MathFileFolderGames.com are brightly colored and fun for kids to work with. The company understands that different people have different learning styles, and all of the math games they offer address each of these styles, while encouraging learning through play at the same time. The goal is to make sure children's numeracy skills are increased, readying them for the 'real world' as adults.
