

Herman ProAV Releases New Information on the Right Way of Selecting an HDMI Cable

February 08, 2018

February 08, 2018 - PRESSADVANTAGE -

Miramar, FL: America's largest distributor of factory authorized replacement parts for consumer electronics, Herman ProAV, has just released new information regarding the different factors that should be considered while purchasing an HDMI cable.

According to David Wolf, spokesperson at Herman ProAV, "As pioneers in the consumer electronics industry, we are proud to be constantly revolutionizing the industry with our pathbreaking products. However, given the large variety of HDMI cables available, people are usually hardpressed to figure out how to select the right cable for themselves."

Most new cables can handle Ultra HD "4K" resolutions, though they might not be able to handle 4K high dynamic range (HDR). For people who are considering getting a new TV, a 4K Blu-ray player or a 4K HDR media streamer, buying a new HDMI cable becomes crucial in ensuring one gets the best experience out of their new device.

There are two ways of identifying whether or not the HDMI cord being used is right for your device. One way

in which HDMI cables fail is that no signal is transmitted from a device to the television screen. This will result in a blank or a flashing screen and is thus an easy problem to identify. The only other "fail" mode of HDMI cables is if users see sparkles or snowflakes on their screen, which is heavy enough to look like static as was the case in old TVs.

Herman ProAV has recently launched a new line of HDMI cables that provide simultaneous multi-stream audio to multiple users, boasting a Dolby True HD, DTS-HD Master Audio and up to 1536kHz audio sample frequency. It has 19 Pin Type A Male to Male connectors with CL3 rated jackets and 24k gold plated connectors that ensures that its customers receive the highest audio and video quality without losing any of it from the Blu - Ray player, Apple TV, PS4, PS3, Fire TV, XBox One, Xbox 360, computers and other HDMI enabled devices.
