Energio Portable Battery Pack Sells Out On Amazon

July 01, 2015

July 01, 2015 -
Portable battery charger manufacturer Energio has proven itself to be extremely popular with customers. Energio is pleased to announce that the launch of their new portable battery pack sold out their inventory almost immediately forcing Energio to rush new inventory to the Amazon warehouses to meet customer demand. Energio's SLIM Portable Charger, which comes with a built-in micro-USB cable, has recently made it into the top 1000 listings in the category of External Batteries for Cell Phones.

As technology shifts to portability it becomes more complicated, powerful, and high tech, ergo the more battery they consume. Batteries for these devices have struggled to keep up with demand and cannot match the high consumption that users desire. Battery banks are becoming increasingly common to use as a backup power source during traveling or being outdoors in general. Many portable battery banks are too large in size to match a consumer's need for portability or simply do not provide sufficient battery time. Carrying such batteries has proven to the users as "awkward and inadequate" as one customer stated. "Hating the awkward look of lipstick-shaped chargers, I looked for a slimmer product and found these good reviews. This one is ultra-thin, sliding easily into a pocket, and is tough enough not to be crushed."

An increasing number of people are moving to more digital interactions and their respective gadget's battery life is emerging to be the bane of their peace of mind. This is the primary reason why portable battery

chargers, which are easy to carry around in the pocket and that hold sufficient power to provide a decent charge are quickly gaining in popularity.

The Energio SLIM portable charger is available with a 3850mAh capacity and eliminates the hassle of carrying around an additional charging cable by having a micro USB extension inbuilt which can be tucked away and hidden from view when not in use. In addition, the high grade lithium polymer battery provides medium sized phones with a full charge. The manufacturers have also focused on its reliability enabling it of over 500 cycles of charging.

Customers of the Energio SLIM Charger have expressed the advantage of receiving a free lightning adapter for charging their Apple phones as an added bonus. The Charger has gathered an impressive rating of 4.6/5 and notably positive customer reviews, "It charges devices quickly and the charger itself charges quickly plus its slim case makes it easy to carry in your pocket. An illuminated LED light makes it easy to check the power level at any time."

Energio has offered their portable charger on Amazon which is now selling for a promotional price. The charger has been selling exceedingly well while in stock and is expected to continue its streak.
