Rez Expert Launches Websites For Strata, Condo, Hotel And Other Industries

June 22, 2018

June 22, 2018 -
DigitalRez, a business that creates digital reservation systems for the hospitality industry with offices around the globe, has launched new RezExpert websites targeted at individual hospitality verticals. The new RezExpert reservation and property management software can do many things for different verticals, particularly the strata, condo, RV, campground, and hotel industries. Details for RezExpert for hotels can be accessed at https://hotel.rezexpert.com/.

Kevin Hall from DigitalRez says: "DigitalRez is a company dedicated to customer service in the development, provision and servicing of the business technology requirements for the hospitality industry. With the RezExpert software solutions specifically designed to be fully integrated, easy to use and extremely reliable, we can cater to hospitality institutions and businesses of all types and sizes."

One of the industries that the RezExpert software focuses on in particular are the campgrounds. The campground management system allows campgrounds to digitally manage their meters, online reservations, and mapping. The system also includes a branded app, credit card processing, automated emails, a point of sale (POS), and reputation management. The modules for the campground system include housekeeping,

central management, CRM features, periodic billing, managing multiple resorts from a central database, batch printing, membership management, a maintenance module, dynamic reporting, automated billing, and IP security. To understand the system and receive a free live demo, interested parties may want to visit https://campground.rezexpert.com/.

Meanwhile, the new RezExpert website created for RV resorts also offers a variety of important tools for the said industry. They include many of the same features as the campground system, as the two verticals are quite closely related, but the one for RV resorts also includes an events module. Kevin Hall explains: "RezExpert is one of the most advanced Java based property management systems for the hospitality industry. It offers a powerful, easy to use grid interface that replicates the familiar calendar. The grid can switch between properties with numbers in each cell representing inventory. The user can easily switch to the individual unit view for listing by each unit within the property." The website for RV resorts can be viewed at https://rvresort.rezexpert.com/.

Those interested may want to contact Rez Expert as soon as possible for further information on how the system can assist their particular reservation vertical.
