

Metalworking Cost Estimation Software Available At Reduced Price On July 4

June 28, 2018

June 28, 2018 - PRESSADVANTAGE -

Micro Estimating Systems Inc., based in Lakewood, NY, has announced that they will be having a sale on their top of the line metalworking cost estimation software on July 4, 2018. The company is the leader in estimating software for metal working and metal manufacturing. The sale involves a reduced price on a second seat of the software. More details about the software can be obtained at <http://microest.com/solutions.php>.

Bernard Woods from Micro Estimating Systems says: "Manufacturing success means beating the competition, not yourself. To be profitable, you must be accurate, flexible and fast. With this software, estimating doesn't mean "guessing" anymore, thereby ensuring that you properly price your metalworking services. For a limited time only, a second seat on this software will be available at a discounted price. We encourage you to contact us for a demo as soon as possible."

Getting estimates right is a significant challenge in the metal manufacturing and working industry. Pricing too low cuts down on prospective profits and estimating too high means that you will have much less clients. This is why MicroEstimating, which is what the company offers, is of such importance. Bernard Woods explains: "MicroEstimating has been helping small and large businesses improve profitability for nearly four decades. With MicroEstimating on your side, you can see more profits by improving efficiency and accuracy in cost estimating."

An added benefit of the system is that it enables businesses to send quotes to existing and prospective customers more quickly, with the knowledge that the quotes will be as accurate as possible. Accuracy in metalworking cost estimation makes for a more profitable business. This is something that the company's many existing customers agree with. Ron B., who represents a machining company in South Carolina, says on the company's website: "Micro Estimating software is a valuable tool to our Company. Using this software, we are able to provide quick and accurate estimates to our customers. Accuracy assures our profitability and predictability. The interface with JobBoss software (our MRP), gives us the ability to export all the estimate details to jobs without manually entering the data. That along with Machine Shop Estimating process layout

sheets provides the tools to effectively implement jobs as estimated."
