

Hearing Center In Mesa Now Offers Widest Range Of Audiology Services

August 17, 2018

August 17, 2018 - PRESSADVANTAGE -

Happy Ears Hearing Center had opened in Mesa, AZ in June 2018, and since then, it has been observed by the community that they have brought 'Happy Ears' to the people of Mesa. They are proud to announce that they now offer the widest range of audiology services in the area, which is something that the community has greatly appreciated. Additionally, they are now recognized as a provider of the best hearing aids Mesa residents can always depend on. A representative from the hearing center says: "Patients always say 'Now I have happy ears!'"

Happy Ears Hearing Center has expertise on the latest technology for hearing aids. Furthermore, they also provide other forms of treatment for hearing problems, including cochlear implants, tinnitus treatment, and bone anchored hearing aids. For the hearing center, the goal is to ensure that people who suffer from hearing loss can regain their quality of life and confidence. With their new office in Mesa, AZ, they are also able to offer their services to a much wider geographical location, which includes Tempe, Chandler, and Gilbert as well.

The audiologists at the Happy Ears Hearing Center are some of the country's top experts in audiology

services and technology. They are completely committed to offering their patients the best possible care. Dr. Chelsea Freeman is the audiologist in the center and she has always been passionate about helping those with hearing problems find the best alternative when it comes to treatment for hearing loss. Specifically, she enjoys working with the whole family unit so that they gain a greater understanding of hearing loss and the treatment options that are available to them. Every patient that comes through her door is treated as an individual with unique needs. Her specializations lie in the treatment of tinnitus, provision of hearing aids, diagnostic hearing evaluations, and cochlear implant technology. She also works with both adults and children.

One of the reasons why Happy Ears Hearing Center has become so popular in the area is because they offer a variety of treatment options. Unlike other hearing practices and stores, they do not focus on just one singular brand of hearing aids, or one type of treatment. This is because the business is neither incentivized nor owned by a single manufacturer. Hence, they are able to offer the treatment and device that is right for each patient individually.

A variety of treatment services are available through the clinic, and they are also one of the few in the region that offer treatment for tinnitus. To ensure that they have the right treatment, they are also up to date on the latest research on what causes tinnitus so that they are able to offer the best solution. A number of causes of tinnitus have already been identified. Tinnitus is a form of hearing loss in which people hear a near-constant ringing. This is a sound that is not audible to others. This can be due to sensorineural issues, which means there is damage to the hair cells inside the cochlea. On the other hand, it can also be noise-induced, which is more common in people who have worked in noisy environments for long periods of time. Presbycusis, which means the tinnitus is caused by aging, is also possible, as are obstructions in the middle ear such as excessive ear wax, foreign objects, hair clippings, dirt, and sinus congestion.

The fact that the Happy Ears Hearing Center places such a strong emphasis on getting to the actual root of the problem, rather than simply prescribing hearing aids, is further testament to their excellence and commitment to patient care. Indeed, it is no surprise that they have quickly been able to set themselves apart as one of the best audiology centers in the area. They offer a wide range of treatments and services above and beyond those already mentioned, including diagnostic hearing evaluation, audiometric testing, tympanometry, real ear verification, ear wax management, custom ear molds and plugs, hearing aid accessories, and the latest technology in hearing aid devices.
