

Hearing Aids In Surprise Now Available Even For Children

August 18, 2018

August 18, 2018 - PRESSADVANTAGE -

Happy Ears Hearing Center has announced that hearing aids are now available in its location in Surprise, AZ, not just for adults but also for children. In offering hearing aids to people of all ages, they have been able to enhance the confidence, quality of life, and overall happiness of people in Surprise. One satisfied patient says: "Happy Ears, Happy Wife. Happy Wife Happy Life."

The hearing center is one of the few places in Surprise that offer full hearing evaluations, which is quite different from hearing screenings. The complete hearing and medical history of new patients will be examined carefully and questions will also be asked about their lifestyle. An audiologist will then use a lighted video otoscope to determine whether there are any abnormalities and whether there is cerumen or ear wax blockage in the ear canal. Patients have stated that they had the most informative hearing evaluation they have ever had, not in the least because the video allowed them to see what the audiologist was doing. Nevertheless, of greatest importance is the fact that with these diagnostic tests and examinations, the audiologist would be able to determine what is wrong so that the most appropriate treatment could be provided.

It is one of the few hearing centers in the area where a pediatric audiologist is a member of the staff. This is because they understand the importance of children being able to hear properly as it assists them in their cognitive, social, and emotional development. Sometimes, a school or pediatrician will refer children who have hearing problems for proper diagnosis. These are usually children who have a speech and language delay or have frequent ear infections. At Happy Ears Hearing Center, hearing evaluations can be performed on anyone from newborn babies to the elderly.

When necessary, the clinic may also conduct an evaluation of the patient's hearing aid, sometimes as part of the overall hearing evaluation. By examining the current hearing aid of the patient, it is possible for the audiologist to determine what kind of hearing aid is more suitable for the individual's personal situation. The hearing center offers a large variety of brands of hearing aids because they are not sponsored by any specific brand. This ensures that patients would be able to find the best solution for their condition and budget. Happy Ears Hearing Center also has the ability to repair most hearing aids in Surprise. If it isn't possible to repair the device, the center can send it in for repair and often perform a warranty exchange. Usually, quick repairs that don't need to be sent out can be done while the patient waits.

Happy Ears Hearing Center also has the capability to work with both bone-anchored hearing aids and with cochlear implants. In all cases, the audiologist will conduct tests and evaluations to ensure that the implant or hearing aid is functioning properly and is suitable for the patient. Cochlear implants are some of the most advanced types of hearing aids on the market today and Happy Ears Hearing Center is capable of working with this type of hearing aid.

Sometimes, hearing loss is caused by an easy to remedy condition, which is the build-up of cerumen in the ear canal. While cerumen is vital for the protection of the ears, it can cause hearing problems if there is an overproduction, resulting in a wax plug. The audiologists at the center can help people with proper cerumen management and would willingly remove any plugs already in the ears.

Furthermore, they also offer treatment for tinnitus, which is a condition that can lead to the affected patients hearing ringing, humming, buzzing, or other sounds. There are various causes of tinnitus and there are treatment methods for each. A complete evaluation will be conducted to help determine what is causing the tinnitus condition in a certain person and how it can be resolved.

Happy Ears Hearing Center has several locations across Arizona. It was founded by an audiologist who has a son with a rare genetic condition known as Usher Syndrome. This condition caused him to lose first his hearing and then his eyesight. Nevertheless, his positive attitude despite his condition had inspired the founder of Happy Ears Hearing Center to offer the best possible treatments for hearing loss. At the same time, they help people manage any hearing loss they may have so that they can continue to have a good quality of life. This is also why the clinic also treats young people, ensuring that their condition is treated as

soon as possible so that they will not miss out on vital parts of their childhood due to their hearing problem.
