## **Fort Worth Slab Foundation Repair Contractor Recommends Routine Inspection**

*August 21, 2018*

August 21, 2018 - PRESSADVANTAGE -

Texas Foundation Pros are pleased to announce that individuals with a concrete slab need to do regular assessments to determine if there are cracks or deterioration in the surface. This might be an indication that the services of the professionals are needed. A Fort Worth local foundation repair company provides slab foundation repair. The workmanship is impeccable and the job is completed using the best equipment, materials and tools to restore the surfaces to firm, stable and safe states.

Texas Foundation Pros recently announced expansion into the Fort Worth area of Texas <https://www.pressadvantage.com/organization/texas-foundation-pros-fort-worth>

Signs of problems with a concrete slab include upheaval, cracks, improperly installed piers, and mold and moisture buildup. Crumbling of concrete in the basement, wall fissures and leaning chimneys are additional signs that there could be a problem with the slab. Upheaval is the opposite of a surface that has settled and cracks can be caused by structural changes or settlement. The building owner who notices loosening door hinges or windows, or windows or doors which stick or jam should contact professionals for concrete foundation inspection and repair.

A spokesperson for the Fort Worth company explained, "We have experience in handling all concrete slab fixup needs including slab fracture repairs. You should avoid severe structural damage caused to your home by hiring an expert contractor. After an assessment, we will recommend the best concrete slab correction methods for your home."

"We start working on the job as soon as possible to complete the task in the shortest time," he continues. "We understand that you need a prompt, safe, and attention-driven approach to your slab repair. We provide quick turnarounds because we know that our clients want to get back to their normal lives in the shortest time possible."
