## **Fort Worth Foundation Contractor Provides Pier And Beam Foundation Repair**

*August 30, 2018*

August 30, 2018 - PRESSADVANTAGE -

Texas Foundation Pros are pleased to announce that the Fort Worth, Texas company has the personnel and knowledge to take care of a range of structure foundational issues. The repairs are available for buildings of every size and configuration. The work done by the Ft. Worth team is both reliable and affordable. The local foundation repair company provides pier and beam foundation repair. This type of building base is used in many buildings, but is not the only type of foundational construction. There is also concrete slab styles.

Each type of building base requires different repair techniques. Typically, pier and beams may suffer damages for various causes. The formation of cracks or other damage can occur relatively quickly when there is a natural catastrophe, or may occur over many years, as a result of water leaks which erode the underpinnings of the posts. Damage can also be caused by aging of the construction and lack of adequate maintenance.

Indications that there may be structural damage include leaks in the plumbing, uneven floors in the structure, the presence of water or mold on interior walls and cracks in the base. TFP specializes in outstanding beam and pier foundation repair. The repair service pros begin with a thorough inspection in order to determine

whether there is a problem, and how extensive it is. This assessment determines the extent of the repair work which will be needed, and the costs which will be required to resolve the problems.

The company recommends routine foundation inspection as published in a recent news release <https://www.pressadvantage.com/story/21605-fort-worth-slab-foundation-repair-contractor-recommends-routine-inspection>.

The team of experts begins by clearing the project area. Plants and other materials are clearing away, with tarps placed to protect the immediate surroundings. A hole is dug in order to gain access to the areas which need repairs. The entire scope of the work is identified before any work is begun. The company uses the best and most appropriate tools which brings the floor to the ideal level. Replacement cylinders of concrete are installed and the jacks are removed. The technicians then fill in the excavated area and clean up any remaining debris.

The company is proud of their many customer testimonials as can be seen on their Google Maps page at <https://goo.gl/FfEuCm>.
