

# **Pensacola Breathing Systems Helmets Get NIOSH Approval**

*September 05, 2018*

September 05, 2018 - PRESSADVANTAGE -

Breathing Systems, Inc. in Pensacola, Florida, has announced that their breathing system products, including the helmets, have now all been approved by the National Institute for Occupational Safety and Health (NIOSH) and have CE certification from the European Union. The company provides Pensacola breathing systems helmets and other products that are used in the petroleum refining, liquid natural gas and petrochemical industries to protect the lives of workers who are exposed to dangerous situations.

Josh Word, a spokesperson for the company says, "All of our products are reviewed and ensured to follow industry guidelines for health and safety. Our products are designed to help protect the lives of industry workers when they are inside small spaces, as well as during inert entry into nitrogen purged vessels."

The breathing systems company also provides products that are used in a number of different activities including catalyst unloading, inspection, tank cleaning and other duties in hazardous environments. Their core design is based on an aerospace principle of fail safe technology that is used by various organizations to protect flight crews. In addition to a number of products, Breathing Systems, Inc. also provides maintenance and repair services to clients including everything from full life support systems to others.

"Our helmet assembly, air supply hoses, air control consoles and communications cables are all essential parts of our life support systems," says Josh Word. "We offer everything that you need to keep your crew safe from helmet assemblies to four man air control consoles, safety harnesses, lens retainers, dual microphone helmet headsets, comfort pad assemblies, and more."

The Pensacola breathing systems company is located in the Gulf of Mexico. It is a privately owned business that designs, manufactures, sells and services various life support systems that are used throughout the petroleum refining and natural gas industries. Products from the company are used during a number of tasks including repair operations, inspections and catalyst handling.

Breathing Systems, Inc. has been in operation for more than two decades. With 21 years of experience

behind them, the company has developed a strong and trustworthy reputation in the industry. Josh Word points out that this is due in part to their experienced, skilled and diverse team. The company has stated that its mission is to be a world leader in the manufacturing and sale of life support systems and equipment and strives to always give customers the very best in customer support and products and services.

Josh Word states that high quality and customer safety are two very important factors for Breathing Systems, Inc. He says that the company strives to always keep their customers satisfied and their accreditations from NIOSH and the European Union, have helped to ensure that this is true. Accreditations from these two organizations are crucial in the industry in order to show that companies are trusted and provide high quality and potentially life saving equipment and services.

Josh Word says that keeping workers safe in this industry has not always been easy. Operating procedures prior to the early 1970s did not allow for man entry into nitrogen purged vessels. The catalyst was also much different several decades ago. Although there have been air breathing masks available for quite some time, many of these have had a long history of accidents, which have deemed them unacceptable for use in the industry today. Word says that because of the governing organizations, today's equipment must be deemed completely safe for use before they receive accreditation, which is how companies can tell that they are purchasing the very best for their employees.

Years ago in the early 1970s, a petroleum refining company in North America pioneered man entry using life support system helmets. These helmets made it possible for men to enter into nitrogen purged catalytic reactors safely. The success of these helmets have led to an acceptance of this new method of downtime reduction and has changed the industry forever. Breathing Systems, Inc. contributes to the millions of dollars in downtime savings that the industry enjoys every year. Word states that the company is proud to be a major part of this industry and that they are looking forward to serving their customers for many more years with the same and even improved quality of products that help them to protect lives. Those who are interested can learn more about the list of products that the company manufactures or the services that they offer by visiting them on their official website at <https://breathingsystems.us/> or by contacting them directly.
