

VW Jetta TDI Owners Face Voided Vehicle Warranty With Performance Chip Tuning, Says DieselPower

June 27, 2015

June 27, 2015 - PRESSADVANTAGE -

DieselPower, a diesel vehicle performance parts company today released new information about their VW Jetta TDI Performance Tuning Parts. They have stated that Volkswagen Jetta TDI owners who are considering chip tuning, an invasive method to increase fuel and engine performance, voids their vehicle warranty. Non-invasive methods with DieselPower tuning modules increase fuel and engine performance, while preserves vehicle warranty.

"In popular VW TDI forums like 'TDI Club' and 'VW Vortex', chip tuning enthusiasts promote the benefits of chip tuning", adds Joe Hafner, spokesperson for DieselPower. "However, owners looking for VW Jetta TDI chip tuning may not fully comprehend the repercussions of the chip tuning process and end up destroying their vehicle."

Chip tuning businesses require customers to cut through the tamper-proof security bolts of a vehicle, take off their ECU and ship it to the company to be flashed, leaving the owner without use of their vehicle until the flashing process is complete. Alternatively, DieselPower provides owners with VW Jetta tuning modules that are easy to install and remove. Indeed, even a novice is able to do it. The tuning module simply connects to

the OEM connectors, a completely non-invasive process. By installing the tuning module, customers can increase their fuel efficiency, torque and horsepower. Most importantly, it preserves the manufacturer's warranty.

One customer left the following feedback after installation of the DieselPower Active CR tuning module in his 2015 VW Jetta TDI:

"I installed the module over 6 months ago in my 2015 VW Jetta and have been extremely happy with the results. I have noticed a significant increase in horsepower and torque especially when accelerating up hills. It was a simple install and I have had no issues with the performance of the module in any way. Joe from DieselPower was very helpful and knowledgeable. You'll love what this module does to the performance of your car!" ~ Lukas W., Chilliwack BC Canada

To find out more about the DieselPower performance tuning modules, the company invites interested parties to visit their website, Like DieselPower® on Facebook and follow DieselPower® on Twitter for product updates and special offers.
