

Mix 107.9 Tech Talk Fort Saskatchewan Radio Show Celebrates Two Years On The Air

October 12, 2018

October 12, 2018 - PRESSADVANTAGE -

The Mix 107.9 Tech Talk Fort Saskatchewan Radio Show has announced that it is celebrating its second anniversary of being on the air. In this radio show for residents of Fort Saskatchewan, Alberta, Canada, the hosts are Luke England and Dan LHeureux, and they discuss technology news particularly on those developments on mobile phones and various accessories for personal communication. This radio show airs every Friday around 5:35 pm and is geared towards those who are interested in developments in communications technology, such as mobile phones and accessories.

Dan LHeureux is director at Telus/Cambridge Electronics Incorporated, an authorized Telus dealer in Fort Saskatchewan. Dan says, "We're a team of about a dozen Telus Specialists, professional problem solvers, tinkerers, and all around geeks, working around the clock to make Cambridge Electronics Incorporated the best Telus Service Provider in the universe."

Luke and Dan usually discuss various technology developments on the radio show. For instance, for techtalksep-14-2018, they discussed about the announcements from Apple regarding the upcoming iPhones. These are the iPhone Xs Max, iPhone Xs, and the iPhone XR. Meanwhile, they noted that Samsung is

coming up with a new mobile phone with four cameras and this will be called Samsung Galaxy Advance. Naturally, these technology developments are related to the services and products offered by Telus/Cambridge Electronics Incorporated.

Telus is the top telecommunications company in Canada. This company points out that they are committed to enhancing the lives of Canadians and the various communities by allowing people to make full use of the power of the Internet to deliver various solutions for the home and the workplace. They have also stated that they are committed to the security and privacy of their customers.

Meanwhile, the Fort Saskatchewan store makes it easy for people to choose the proper wireless device and match it up with the accessories that they require, share them on social networks, integrate them with the web services they already use, and then track their results. Dan says, "You'll love mixing and matching smartphones, plans, features, and the accessories to suit your needs - think of it as your own personal communications hub."

Recalling the various episodes of the radio show, Dan and Luke realize that they have been talking about mobile phones and accessories that people can use for their communication systems. In Tech Talk June 30th, 2017, Dan and Luke discuss Apple's relaunching of the iPhone 6 and the introduction of the Google Home smart speaker. Also, they noted the change in the procedure for the repair of iPhones at the store.

In Tech talk Nov.18, 2016, Dan and Luke discussed the various deals being offered by the Telus/Cambridge Electronics Incorporated store. These include deals for tablets, various points being offered that customers can use for getting free movies, promos related to the Google Pixel phone, and deals for data being offered by the store.

The Telus/Cambridge Electronics Incorporated store also has a blog on its website to provide helpful information on technology developments. For instance, in their September 20, 2018 post, they focus on the Orzly Compact Stand for Apple Watch. This stand can fit all models and sizes of the Apple Watch and its purpose is to make it easy to display and charge the Apple Watch.

The September 19, 2018 post discusses the AddAcc Magnetic Charging Cable for Apple Smart Watch with 3.3-ft iWatch USB Charger Pad, Wireless and Portable for Apple Watch Series 3/2/1. This magnetic charging pad can snap the Apple Watch into place automatically while it is being charged. This charging pad has the same size as the original Apple charging pad and its advantage is that it makes it easy to connect the Apple Watch with a computer, power bank, laptop, or other devices with USB output.

And one of the posts on September 18, 2018 discusses the iPhone Xs and Xs Max that would be available at the Fort Saskatchewan store by September 21. Both phones have a Super Retina display with custom-built

OLED panels for providing the best color accuracy. The new iPhones will have an Advanced Face ID for securely unlocking the iPhone, logging in to apps, and paying with just a glance. These iPhones' A12 Bionic chip are equipped with a next-generation Neural Engine that utilizes real-time machine learning to enhance the way people experience gaming, photos, augmented reality, and more.

People can get a lot of information from the Fort Saskatchewan store's website and their Facebook page. Thus, those who want more information can visit the store's website and their social media page.
