Contracting Services

Asbestos Removal In St Louis Offered By ABC Contracting

October 05, 2018

October 05, 2018 - PRESSADVANTAGE -

ABC Contracting in Foristell, Missouri, has announced asbestos removal services for the St. Louis area. The company recently announced that they are now offering asbestos removal St Louis services, as well as in other areas surrounding the region. The company states that they are proud to be offering the removal of this dangerous substance and states that anyone who feels they have been exposed to asbestos should seek medical attention.

Tina Benton, a spokesperson for ABC Contracting says, "We provide comprehensive asbestos removal services for residential and commercial clients. Our professional removal puts safety first every time and our effective removal ensures that you never have to worry about asbestos exposure again."

Benton says that the company can safely and effectively remove hazardous material quickly and completely. Asbestos is an insulation material that was commonly used in homes and other structures until late in the 19th century. Until then, it was considered a safe insulating material. However, news of dangers spread quickly and companies stopped using it for this purpose. Unfortunately, before those dangers were discovered, many buildings have already been insulated with asbestos.

"Asbestos is dangerous," says Benton. "Exposure to asbestos can cause a number of life long illnesses like lung cancer. If you believe for one second that your home or office has asbestos, you need to get it removed immediately."

Benton states that after continued exposure, people around asbestos can develop any number of serious diseases and states that it is particularly dangerous to children and the elderly, whose immune systems may not be at full force. The company states that their certified professionals can safely remove asbestos from homes or businesses so that the threat of exposure is eliminated. In addition, the company offers related services that are designed to help secure residential and commercial structures for occupation. Other services include testing for asbestos, inspection surveys, popcorn ceiling removal, insulation installation, and vinyl floor tiling.

Asbestos removal can be very dangerous if not done properly. ABC Contracting states that they have a team of highly trained and educated professionals who know the dangers and risks related to removing asbestos. The company states that they are certified and authorized by law to perform asbestos removal services and states that they offer these services throughout the St. Louis and Metro East areas.

Benton says that anyone who lives in a home or works in an office building or other structure that was built prior to the 1980s should have that building inspected for asbestos if such an inspection has never been performed before.

Removing asbestos from structures involves taking away the insulation material from the surface and placing it into safe handling containers that can be disposed of at approved sites. The company states that any individual who has not been certified as an official asbestos remover should never attempt to remove this material as exposure can cause lung cancer, mesothelioma and various other lung issues. Individuals who are not certified to work with asbestos should also never be near a site where asbestos is being removed. Buildings and structures that are verified to contain asbestos must be evacuated before any removal processes should begin. By law, asbestos removal is required for any structure containing it before that structure can be legally torn down or renovated, as well. The company states that anyone who feels they may have asbestos in their home or office should contact the company through their official website or directly to schedule an inspection. Their official website offers more information about the variety of services that they offer, in addition to a listing of the dangers of being exposed to asbestos and more information on asbestos in general.

ABC Contracting says that there are a number of advantages to removing asbestos, but not removing it can cause a number of adverse issues. ABC Contracting is a privately owned company specializing in construction and environmental issues including the removal, remediation and location of asbestos. The

company works with general contractors for residential remodeling, abatement, and water mitigation, as well as other services. The company states that their national resources and their employees provide customers with the requirements needed to handle all construction and environmental needs, from large scale property loss to the residential removal of asbestos. The company states that they are committed to the success of every project they undertake. ABC Contracting is a veteran owned and managed company.
