

Converting Your Iphone Into an Underwater Camera

July 01, 2015

July 01, 2015 - PRESSADVANTAGE -

Playtime Gadgets an Las Vegas, NV company has created what can only be described as a device that will convert your smartphone into an underwater camera. The device instantly converts any iPhone or smartphone into an underwater camera. As the company CEO states, "It's like a wetsuit for your iPhone". The gadget is available now, and is already a huge hit with vacationers as they head to tropical beaches around the world.

"Protecting your iPhone/ smartphone investment is important, and that is just what this new device will do", says company spokesperson Daniel Hall. iPhones after all, are not cheap. This gadget will enable users to use their iPhones like underwater cameras, and protect them from water damage at the same time. Those who love taking pictures, particularly underwater pictures, are sure to find this the best underwater camera, because it gives them the best of both worlds. "I love my iPhone, but I'm not about to just dive in and start snapping pictures with it without some type of protection. This device does both, which makes my underwater picture taking much more enjoyable", says an avid iPhone owner.

As far as underwater cameras go, this one offers something others don't. It gives users the ability to store the images that they capture right on their phones, so they can instantly upload to Facebook, Instagram, and other social media sites. iPhone is popular in part due to the picture quality that the camera provides.

Underwater however, has been an issue with the smartphone, until now. This device protects iPhone from damage, and gives users the same high-quality images that they want. The product is being launched just in time for the summer vacation rush, giving iPhone users the ability to take their smartphones along with them when they dive or snorkel, or even swim in the pool.

The camera itself is not inhibited in any way, so images come out clear and concise, just as they do on land. The device is also much more affordable than traditional underwater cameras, which can cost upwards of \$300 or more. The cover will fit most smartphones, including the iPhone lineup and many Galaxy phones as well.

The phone "wetsuit" also comes with a complete underwater photography DVD training guide so that users will be able to properly install and use the cover to take stunning underwater photos and video, protecting their iPhones from water damage completely. The company also offers a photo reference guide, and attests that the cover is perfect for any wet condition including snow, mud, and rain. The reference guide is also waterproof, and a full money-back guarantee is offered.

With this newest device on the market, it is expected that image capturing and social media updating will hit an all-time high, as more and more iPhone users learn that they can safely take underwater pictures with their smartphones, without incurring any damage to the phone. Those wishing to learn more about this smartphone wetsuit can contact Playtime Gadgets, or spokesperson Daniel Hall for pricing and other information.
