

Energy Catchers In Wilmington Announces Cost Efficient Roofing

October 11, 2018

October 11, 2018 - PRESSADVANTAGE -

Energy Catchers in Wilmington, North Carolina, has announced that they are providing cost efficient roofing for area customers. The Wilmington roofing company says that they are offering metal roofing materials which are one of the most energy efficient materials used for home roofing.

Jay Dunbar, a representative for the company says, "A quality metal roof can save your home up to 40 percent of what you are currently spending on heating and air conditioning. Metal roofs help to keep heat and air from going outdoors through the roof, keeping that comfortable air indoors where it belongs and keeping your HVAC unit from kicking on and off constantly in order to keep your home or office interior temperature comfortable."

Dunbar says that the company works with a number of materials to meet all of the needs of their customers. More on the company and their years of experience can be seen at <https://plus.google.com/u/3/117100845120826591530/about>. Dunbar says that metal roofing allows for optimal energy efficiency and that not only does a metal roof allow for energy bill savings, but also provides environmental benefits. He states that metal roofs today come in a wide range of colors, designs and styles

and that there is something to suit every home design, functionality and budgeting need.

Metal roofs reflect solar radiation more than roofs that are finished in asphalt shingles or other materials. For homes in warmer climates, he states that these roofing types not only reflect solar energy but can also help to cool homes because they emit solar radiation that is absorbed through them. Painted metal roofs can help to trap and then reemit around 90 percent of the solar radiation that they receive.

"There are just so many benefits of having a metal roof installed," Dunbar continues. "Even older homes can benefit from the energy savings that a metal roof can bring, and they are among the most affordable types of roofing that you can have installed."

Dunbar says that Energy Catchers can install metal roofing on existing homes or on new builds. They provide a wide range of services for residential and commercial customers in and around the Wilmington area. Energy Catchers is a locally owned and operated business with more than 20 years of experience in the roofing industry. The company states that they are fully insured and have a staff that is up to date with all new regulations and technical advances in the roofing field. More on the company can be seen at <https://www.google.com/maps/place/Energy+Catchers/@34.2385259,-77.8891119,8z/data=!4m5!3m4!1s0x0:0xa861bed3578c1284!8m2!3d34.2385259!4d-77.8891119>.

Dunbar states that energy efficiency is an area where many homeowners are concerned today. He states that metal roofing is not only more energy efficient than asphalt but traditionally lasts longer, as well. Asphalt shingle roofing typically lasts around two decades or so. Dunbar says, however, that metal roofs can last anywhere from 40 to more than 70 years and says that they have lower maintenance requirements compared to traditional shingled roofs.

Many metal roofing materials are also economically friendly because they are comprised of up to 60 percent recycled materials. Metal roofs can also be recycled once they are removed if and when a new roof is needed. The company states that metal roofing can be installed in shingle or panel form and comes in a variety of different colors and architectural designs. Dunbar says that when choosing a metal roof for energy efficiency, it is important to know all of the aspects that go into the installation of that roof. He states that Energy Catchers will consult with homeowners and ensure that they fully understand all of the aspects that go into their metal roof, including the total overall cost and an estimate of how much the homeowner will be able to save over a traditional asphalt roof.

Energy Catchers says that they use the most economically and budget friendly materials for roofing installation and that those materials will last much longer than some traditional roofing options. The company states that home or business owners in the Wilmington area can contact them for an onsite quote for a new roofing replacement and says that they can help customers to better understand how a new roof can save

them money every year on their energy costs. Dunbar says that whether consumers are building a new home or simply need a new roof on their current home, the company offers reasonable pricing and high quality roofing materials. Those who are interested in learning more can visit the company on their official website for a complete list of the services that they provide.
