

Portable Church Layout Redesign Offered By Church On Wheels

October 29, 2018

October 29, 2018 - PRESSADVANTAGE -

Church On Wheels, a provider of mobile church solutions in Madera, CA, has announced that they are offering portable church layout redesign services. They offer a stage that is portable and durable but has a compact design. The design makes it easy to load the stage to a cart. The said stage is so easy to setup and tear down that only one person is required to setup or tear it down.

Mike from Church On Wheels says, "We manufacture and produce hundreds of products that help streamline the mobile church process. Our goal is to help your church setup and teardown as quickly and efficiently as possible. This helps reduce volunteer burnout and allows you to focus on what God has called you to do ... build His Kingdom!"

Mike continues, "Church On Wheels has helped countless churches create a rock solid mobile foundation to start on. Our systems create enthusiasm for volunteers and attendees, by helping you do something revolutionary ... set up church in lightning fast speed in a rented facility every week. For those who are already mobile, please note that we have helped many churches that started on their own and after two or three years of stress came to Church On Wheels for help."

Church On Wheels develops a custom package or system for the client's church, using a multi-step process that begins with a consultation and is completed with the delivery of the new system. Mike explains, "These custom packages/systems are fully functioning, we provide virtually everything you need to have church in a temporary facility. We mean everything ... from digital soundboards to diapers."

The first step in the process is a site visit. A Church On Wheels team visits the church site and consults with the staff. Two kinds of site visits can be done. The first one is a traditional on-site visit where a Church On Wheels consultant and others will go to the church location and spend a day there discussing various key factors. The second one is a Virtual Site Visit, which is done through Facetime or Skype. During those consultations, all areas of the church are discussed and how Church On Wheels would be able to help develop a Complete Mobile Solution for the new church or multi-site location.

After the site assessment is completed, the Church On Wheels staff will develop a very specific proposal that includes a layout map and various items indicated for each area of the church so that the client can get a true picture of what everything will look like after the redesign has been finished. Also to be provided is a breakdown of volunteer requirements to complete the setup and teardown including the offerings and tithes estimate based on the demographics and critical barriers that the church will have to face.

An important component of the mobile church layout is the portable stage. Mike explains, "The Church On Wheels portable stage is very durable and has a compact design. That design makes it easy to load on to our portable stage carts. When paired with our cart, our portable stage is the easiest stage to setup and tear-down. In fact, it is so easy that only one person is needed to setup an entire stage. This makes our stage very fast and convenient for churches with small setup and tear down teams. Our portable stage is made in the USA, in the Church on Wheels facilities."

Church On Wheels has several products available for mobile churches and these are categorized as follows: hospitality or welcome center; children's ministry products such as portable toys, soft flooring and play panels; pipe and drape products that provide an easy and quick way to transform a room; staging products, of which the primary product is the portable stage; carts, such as the 3/4 enclosed cart, miscellaneous storage cart and open transportation cart; video products, such as projectors, screens, converters, cables, and cameras; trailers; lighting products, such as truss base with wheels, square truss, F34 truss, and more; and audio products, such as the audio card and storage rack, Behringer X32 mixer, and Behringer S32 digital stage box.

Church On Wheels is a manufacturer and producer of hundreds of products that can help in streamlining the mobile church process. The primary goal is to make the setup and teardown as fast and efficient as possible. The benefit is less volunteer burnout. Mike says, "The heart of Church on Wheels is our staff and the passion

we have to help mobile churches succeed."

Church On Wheels

The heart of Church on Wheels is not the carts, portable stages nor other products we offer. Our creation was born from a challenge from our founder's pastor to use his talents to help build the kingdom.
