

Edgewater Dentists In Sarnia Provide Laser Dentistry

November 16, 2018

November 16, 2018 - PRESSADVANTAGE -

Edgewater Dental, a dental office based in Sarnia, Ontario, Canada, has announced that their dentists have started to provide laser dentistry services in Sarnia. Previously, the dental office had announced the addition of the Solea Dental Laser to their dental equipment. Now, the Edgewater dentists in Sarnia have started to make use of the Solea Dental Laser, which can be used for both hard and soft tissues.

An Edgewater Dental spokesperson says, "We are happy to announce that our dentists at Sarnia are now using the Solea Dental Laser to perform laser dentistry. This is good news for Edgewater patients because the use of a dental laser means there is hardly any pain because the nerves are not disturbed. Furthermore, the use of the laser as a drill means there is no irritating noise or vibration."

The Edgewater Dental spokesperson explains that the Solea Dental Laser is the first carbon dioxide laser system approved by the FDA for soft and hard tissue dental procedures. It was developed by Convergent Dental in Boston, MA, based on a study performed at the University of California School of Dentistry. The Solea Dental Laser makes use of a unique wavelength and is guided by sophisticated computers to provide virtually painless dental procedures for both gums and teeth, ranging from simple cavities to complex surgeries.

The spokesperson points out that the implication of the use of laser dentistry for patients is that Edgewater dentists are able to perform multi-quadrant dentistry, fillings on the fly, and soft tissue dental procedures in just one appointment. The result is that patients are able to get the dental care they need in just a fraction of time it previously took to perform those procedures. With the usual dental procedures that required anesthesia, patients often left the dental office still feeling numb. In contrast, with laser dentistry, there is no need for anesthesia and patients can immediately get back to work without the discomfort and distraction from that numb sensation.

Meanwhile, patients who have experienced Solea Dental Laser services at Edgewater Dental have started to provide positive reviews. For instance, Ron J. gave the dental office five stars and said, "Huge thank you to Dr. Jessica Milne and her amazing staff at Edgewater Dental. Just experienced laser dentistry by Solea. Laser alleviated my anxiety with no needle, no drilling, and I left with great fillin'." Sadie C. also gave them five stars and said, "I have always been afraid of visiting the dentist. The experience I had a pleasure of receiving at Edgewater Dental was nothing short of life-changing for me. I was absolutely comfortable, informed and treated with kindness and compassion from Dr. Jessica Milne and all hygienists. I now look forward to visiting the dentist. The reception staff is welcoming and kind and the service is impeccable. Keep up the amazing work!"

Edgewater Dental is made up of a team of professional dentists that always strive to provide quality care to every patient. They point out that because of their compassion and empathy, they always ensure that a patient's appointment is as comfortable as possible. They offer various kinds of dental services. These include general dentistry, cosmetic dentistry, orthodontics, and laser dentistry.

Cosmetic dentistry services provided by Edgewater Dental include porcelain crowns, porcelain veneers, tooth whitening, tooth recontouring, and Invisalign teeth straightening. Orthodontics services are basically through Invisalign custom-made aligner trays. These aligner trays are custom-made for each patient are made from smooth and virtually invisible plastic that the patient wears over teeth. The aligner trays are removable, which allows patients to brush and floss their teeth normally in order to maintain the health of their gums. Furthermore, because the trays are almost invisible, there are no unsightly metal braces. Patients can also avoid the inconveniences of traditional braces, such as bits of food getting stuck in between.

The two primary dentists at Edgewater Dental are Dr. Jessica Milne DDS and Dr. Tim Pringle DDS. After obtaining her dentistry degree from the University of Toronto, Dr. Milne returned home to Sarnia to work at Edgewater Dental. She discovered her passion for dentistry when she worked in her father's orthodontic office. Like Dr. Milne, Dr. Pringle was also born and raised in Sarnia. He finished his undergraduate degree at the University of Western Ontario, and he did a dental surgical residency at Royal London Hospital dental school while studying for his Doctor of Dental Surgery.

Those who need more information about laser dentistry and other services at Edgewater Dental can visit their website or call them by phone.
