

XP Labs Has Signed Up A New Dealer Spectrum Wide Health East York

November 26, 2018

November 26, 2018 -
XP Labs, a North Bay, ON based company that offers health supplements, is very excited about its new dealer, Spectrum Wide Health, which is in Toronto, ON. Their supplement products, including protein powder, are available to health enthusiasts everywhere. The supplement company's North Bay location, at 40 Ferris Dr Unit 201, is very proud to provide these health products through dealers like Spectrum.

The company sells its whey products to its customers via its website and dealers like Spectrum Wide Health East York. Their protein powder, ISO XP, and their waxy maize, Glyco XP, are two of the supplements they offer. The supplements are designed to deliver sports nutrition and can be used by athletes such as football players, world-class endurance athletes, professional hockey players, soccer players, tennis players, and Olympic swimmers. Other customers include bodybuilders, seniors, hikers, weekend gym-goers, and more. One of the great things about whey is that it can travel very easily. If customers have access to water or a vending machine, all they have to do is carry a container of their choice with a scoop of powder in it. A different option would be to carry a pre-made shake, much like some people carry around a coffee or a smoothie.

Most whey proteins come from dairy cows that live in feedlots. They are fed a mixture which often has been treated with chemicals to keep it fresh or bug-free. So the cows do sometimes eat pesticides and they may even be eating fertilizer or other chemicals that we wouldn't consume. As if that weren?t bad enough, the animals are often injected with a variety of hormones and are administered antibiotics. The government of New Zealand, however, does not condone these practices, and therefore the dairy produced for New Zealand whey protein is free of any questionable substances. And not a single cow spends a day crammed in a smelly feedlot or made to stand in mud without access to the sun. Instead, the cattle graze on naturally lush green grass along the New Zealand countryside, getting all the nutrients and health benefits they need from the rich soil and the sun. The healthier and happier cows produce a better quality milk which means a better quality of protein.

The company says that ISO XP is a nutrition solution for hypoglycemic and active lifestyles. John Messenger, a representative for the company says, ?Our ISO-XP is a high protein supplement with natural sweetener and is by far the cleanest and uses the highest quality New Zealand Whey Protein available.? Messenger says that the ISO XP grass fed whey is filled with amino acids and probiotics. It contains wholesome nutrition that is made from grass fed all natural whey from New Zealand. The company states that the whey supplement is designed to help with muscle growth, fat loss, hormone regulation and cellular health. All their products are made with all-natural ingredients such as the sweetener Stevia, which enhances the flavor, and probiotics which aid in digestion.

Their Glyco-XP product contains an ingredient called WM-HDP which helps to burn fat. The problem with the carbohydrate sources found in just about every sports drink, pre-workout and post-workout formula is that they use simple sugars like sucrose, fructose or maltodextrin. These sugars cause very rapid spikes in insulin followed by rapid crashes which can wreak havoc with the body?s ability to burn fat and can increase the risk of obesity. But a healthy, all-natural carbohydrate source that literally increases metabolism while increasing fat oxidation has been created. This carbohydrate, known as WM-HDP, is the engine behind Glyco-XP. This key ingredient can deliver high-performance, sustained energy without spiking or crashing blood sugar levels. So athletes can use both carbs and fats for fuel.

XP Labs News from the company has been good. The company says that their whey protein products are receiving stellar reviews from their customers. They go on to say, ?We have recently received a number of positive reviews from customers who claim that their whey protein is the best on the market.? John Messenger says, "Our high quality whey protein isolate is really making its mark. Customers are contacting us and letting us know how pleased they are with the protein supplement and they are leaving their reviews online, as well."

To get more details about the company's products customers can visit their website at xplabs.net. They can also contact John Messenger by calling him at their lab in North Bay, ON.
