

ABR Electric Stresses The Importance Of Whole House Surge Protection

December 12, 2018

December 12, 2018 -

ABR Electric, a business based in McKinney, TX, wants to stress to homeowners and building owners that it is vital to have a whole house surge protection device installed at the point of service in the home or building. The company, which provides the best electrician in McKinney TX, explains that when it comes to lightning, if the lightning strike occurs close to the home, the surge protectors and even uninterruptible power supplies won't be able to handle the power surge from the lightning.

James Adams, spokesperson for ABR Electric, says, "During a lightning storm, while the probability of the lightning strike occurring close to the home is very small, it is still possible and if it does occur, expensive electrical devices can get fried and rendered worthless. That is why a whole house surge protection device or suppressor has to be installed at the point of service so that it protects all electrical devices in the home. For this you will require an experienced electrician, and for those who are asking "where can I find an electrician near me?", ABR Electric is just one phone call away."

The whole house surge suppressor has to be installed between the main board and where it splits off to the home. Basically, the whole house surge suppression device must be placed before the electrical panel for the

house.

The professional electricians from ABR Electric are capable of providing electrical services for homes and buildings. These include electrical panel safety inspections, complete or partial home or business rewiring, electric service and meter upgrades, electrical troubleshooting and electrical repairs, older home rewiring, installation of interior and exterior lighting, installation of spa circuits, electrical vehicle charger installation, 240 volt and 480 volt installation, aluminum wiring corrections, electrical installation to A/C lines, installation of dimmer switches, and whole house surge protection.

James Adams adds, "When you have a problem with your electrical system, don't hesitate to call us. We have licensed electricians and electrical contractors who will know where to find the problem and provide the appropriate remedy."

Electricians from ABR Electric can be depended upon to solve various electrical problems of the home or business. These include power outages, lights not working, tripping circuit breakers, flickering lights, outlets or switches that are warm to the touch, outlets that are not working, circuit breakers that won't reset, and a three way switch that is not working properly.

The fact that they provide the best electrician in McKinney is attested to by reviews provided by past clients. For instance, JD Dowd gave them a five star rating and said, "Recently installed my Tesla Wall Connector. Excellent, professional service. Small family business staffed with licensed electricians. They accommodated my schedule and did first-class work. Highly recommend. Call them after you have gotten estimates from others. You'll be glad you did."

Another client, Lou H. also gave them five stars and said, "Someone else has already used my planned expression, but I'll give it anyway - 'Best Electricians Ever'. James has serviced several requests on both my rental and primary homes, and each time he has been prompt, professional, courteous, and knowledgeable... And he's extremely tactful about "suggesting" alternative ideas that the "homeowner" (me!) originally-thought were the correct way to resolve an issue. [...] Engage these guys first and you won't need to go anywhere else. Thanks, James and ABR!"

Kim C also gave ABR Electric five stars and said, "ABR helped repair a light switch and installed a can light quickly. Decided I wanted 3 more can lights. They drove down to Plano to get matching lights, then returned and installed. Awesome."

ABR Electric provides licensed electricians and has more than 20 years of experience in serving customers satisfactorily. Their business hours are from 8:00 am to 5:00 pm, from Monday to Friday.

Those who need more information regarding their electrical services can visit their company website, the ABR Electric YouTube web page, or call them by phone.
