

Cleartronics Debuts Their Latest Modern Silicone Wedding Ring

July 10, 2015

July 10, 2015 - PRESSADVANTAGE -

Cleartronics, a business in Chicago, IL, has released a set of two silicone wedding rings, while emphasizing their advantages over the usual gold ring. The listing can be seen on <http://www.amazon.com/gp/product/B00Y8WY7KA>. The rings come in black and silver and have been voted as a favorite product by mothers. It is hoped that more people will find themselves empowered to break from tradition and say "I do" in a more modern way.

"Traditionally, wedding rings were made of gold, but we have slowly seen a move away from that, with rings made from materials such as titanium, platinum and stainless steel," says a representative from Cleartronics. She adds, "We want to create the next big fashion statement and have therefore started to offer silicone wedding rings, which have already been welcomed by moms all over the world."

One benefit of the silicone rings is that they are fully hypoallergenic, as they are made from medical grade silicone. This makes them both heat and water resistant. The design of the ring is very classical, being 5mm in width. This means that they are suitable for men and women alike. Thanks to the eco-friendly material, the rings are fully resistant to high and low temperatures, pressure, oil and water. As such, they are the perfect ring for people who work with their hands, for instance.

"When people hear silicone, they don't necessarily think about durability," adds the representative. She explains further, "However, we understand that a marriage is supposed to last a lifetime, as are the rings symbolizing this union. This is why we have backed our rings with a full, no questions asked lifetime guarantee. If anyone isn't happy about their product, they can get their money back immediately."

The material used in the construction of the ring means it is suitable to wear while active such as biking or yoga. Furthermore, it is comfortable even for pregnant women, which is one of the reasons why it is loved so much by moms. Additionally, the material of the ring means it can be worn by people in the military or medical professionals alike.

Silicone is a very modern, 21st century material. It is no surprise, therefore, that it is starting to be found in many different areas of our lives. And now, this includes wedding rings.
