

Lawn Care Company Teams Up With Local Solar Panel Installer For Greener Lawn Care In Springfield, MO

July 08, 2015

July 08, 2015 - PRESSADVANTAGE -

Until now, there has been no environmentally friendly option for lawn care Springfield MO homeowners. But recently a leading landscaping professional, Green Tech Lawn Care, has teamed up with local solar panel installer, Brighter Side Energy, in order to provide customers with a greener approach to their lawn maintenance needs. And this is not a play on words. While customers' lawns are growing greener, they will also be using a company that is promoting the use of solar panels to help conserve energy and provide a healthier way of living for homeowners in the Springfield area.

John Krygiel of Green Tech stated that "We decided to collaborate with Brighter Side in an effort to utilize the power of the sun in our operations. It just made sense to go the extra mile to really help keep our community, not to mention our customers, healthy and happy." The collaboration has been in the making for quite some time and is now underway as Green Tech vehicles are now fitted with solar panels that allow them to capture and store energy from the sun for use with landscaping equipment.

The company takes sustainability seriously and strives to provide a healthier place for all by using organic fertilizers and now, equipment with solar panels. Green Tech has been using chemical free fertilizers, safe for

families and pets, for a number of years. The company has taken many steps to help protect the environment and offer customers a more environmentally friendly approach to their lawn care needs. Now, they have taken things a step further with the implementation of solar panels that will help to run landscaping equipment. This will help to preserve the environment for future generations, which is why the company has opted to provide greener lawn care Springfield MO residents can benefit from.

"Greener lawn care is something that should have been done decades ago", states a spokesperson for Brighter Side Energy. "Everyone is adding solar panels to their homes, and there are smart cars everywhere. Why not solar powered lawn care equipment?"

The solar panels help to power mowers and other equipment, which helps to cut down on the amount of gasoline and other fuels that are used for lawn maintenance. The panels attach to the company's vehicles and capture energy from the sun. That energy is stored and then those solar powered batteries are plugged into landscaping equipment. Instead of using fuel or electrical power, the lawn care equipment uses power from the sun, much like solar powered houses.

Green Tech is currently the most environmentally friendly lawn care in Springfield MO. Those interested in more information about renewable energy and its benefits, or about the environmentally friendly lawn care option offered can contact Green Tech Lawn Care.
