

Bakersfield Tree Pros LLC

Tree Service Company in Bakersfield Announces New Website

December 27, 2018

December 27, 2018 - PRESSADVANTAGE -

Bakersfield Tree Pros LLC, a tree services company that works in Bakersfield and the surrounding area has announced that they have launched a new website. The new site will allow greater access for their customers to contact the company as well as see recent updates and announcements. The services that Tree Pros offer are for both residential and commercial properties.

While normal maintenance such as pruning can be done by the property owner, there will be times when a pro is needed to take care of an issue. Storms can do major damage, like bringing a tree partially or completely down, or breaking branches. If it is a partial downing or the branches are down on a building, a fence, a structure, or road in the community the property owner may not be able to handle it alone. This is especially true of any downed or partially downed tree at night as it is extremely unsafe to attempt tree or branch removal in the dark, or alone. At that point, it is best to call a tree service.

The new website shows that Bakersfield Tree Pros provides the following tree services: tree removal, trimming, stump removal, lot clearing, emergency removal, and bough removal. The Bakersfield Tree Pros will come out, look at the job, provide a free quote, and then if the property owner chooses to go ahead they

will do the job right.

Stumps are no problem for the tree pros, they will grind the stump down and make sure that it is gone so that there will not be a trip hazard or an impediment to mowing. Stumps can be home to different bugs that a property owner does not want near the home or business structure; termites and other pests could lead to even more problems for the property owner later on.

At times the property owner may feel that the branches that need to be trimmed are too far up for doing it themselves. The time to do normal tree trimming may not be in the property owners schedule or there may be medical issues that do not allow them to do it themselves. This is where it is best to hire professionals like Bakersfield Tree Pros to take care of the job. Regular trimming of tree branches keeps the branches from causing power or cable lines to come down. Many times a tree may look healthy to the untrained eye while the inside has rotted and become hollow and weak; this could cause major issues during a heavy storm of rain, wind, or snow.

When a property owner needs to clear a lot for building it can seem a bit overwhelming, especially if there are large trees or a number of trees. Bakersfield Tree Pros can do the job. They have the correct size saws and equipment to take down trees and grind stumps to leave the lot clean and clear, ready for building or planting.

Bakersfield Tree Pros employs licensed and bonded workers who are also arborists. This means they know exactly what types of trees the property owner has and if they are diseased, dying, or dead. It also means the property owner can rest assured that the company can take care of any tree, even those that are close to power lines.

The Bakersfield Tree Pros are open Monday through Saturday 7am to 5pm and can perform any tree service to Bakersfield, as well as the surrounding cities. They provide free quotes for each service performed and their rates are competitive and reasonable.

Property owners can have tree services done without worry of injury to them or their property when they use the professionals at Bakersfield Tree Pros. Depending on the contract agreed to, they will do the work and clean up after so that the owner will not have to worry about it. The owners can then walk the property without tripping or getting hurt after the Tree Pros have finished their job.
