

Pioneer Water Tanks, Manufacturer Of Australian Made Rainwatertanks, Partners With ReAqua

January 16, 2019

January 16, 2019 - PRESSADVANTAGE -

Bellevue, Perth based Pioneer Water Tanks is pleased to announce their recent partnership with ReAqua, one of the country's leading solar pumping specialists, to provide affordable and reliable water pumping and storage solutions for Australia's agricultural, commercial, and residential needs.

"Our mission is geared towards providing all of Australia with easily accessible fresh, clean, and safe water. Pioneer Water Tanks utilises the latest in technology to keep your tank water in pristine condition. We take pride in our AQUALINER Fresh® tank liner with built-in antimicrobial technology, which actively works to inhibit the growth of bacteria, mold, and algae in the tank. Furthermore, our AQUALINER Fresh® with SANITIZED® technology keeps your water fresher, cleaner and healthier for longer," said Scott Barnett from Pioneer Water Tanks.

As the leader in rainwater tanks, Pioneer offers an extensive range of products and water solutions, such as rainwater harvesting, potable (drinking) water storage, fire fighting protection, and a variety of other water storage applications. "Whether you require a small 10,000 litre (10kL) tank or up to a three million litre (3ML) tank, we have the experience and capability to meet all your water storage requirements," Barnett added.

Pioneer Water Tanks was established in 1988, and since that time has supplied and installed more than 80,000 rural and commercial water tanks in Australia. According to Barnett, all Pioneer tanks are reinforced and specially engineered with their exclusive 8-80 V-Lock® tank wall profile to ensure improved overall strength and durability. He explained that, "When you deal with us, you are actually dealing with the Pioneer Dealer Direct® network, Australia's largest network of experienced local tank experts. With this network in place, Pioneer can provide the highest quality water tanks together with outstanding local customer service and ongoing support."

Meanwhile, their new partner, ReAqua, is known for their LORENTZ German-engineered solar water pumps. Their multi-industry experience and expertise, in both water pumping and solar energy harnessing, allows them to deliver straight-forward solar pumping solutions from small-scale livestock and farming operations up to a very large scale fully integrated solar-powered hybrid irrigation projects.

The partnership between ReAqua and Pioneer Water Tanks enables them to offer a comprehensive pumping and water storage solution for the country's agricultural and farming industries. Pioneer and ReAqua aim to work together to provide reliable, efficient, and cost-effective solutions across Australia in these key sectors.

Those looking for high quality Australian-made water tanks must consider Pioneer Water Tanks. They are considered one of the leading manufacturers and installers of water tanks in Perth and all areas of Australia, based on a number of positive reviews and recommendations they receive online.

Wayne Knight, from Otway Blueberries, said in a Google review that, "We purchased two Pioneer Water tanks because they were the only brand that we could find that actually uses Australian steel. In fact, even their liners are also made in Australia. I see water tanks as a long term investment and did not want to have sub-standard steel from an unproven source holding our tanks together. Furthermore, both of our 240,000-litre capacity tanks are in prime condition and are functioning really well as of this writing. I can highly recommend their products."

"We highly recommend Pioneer Water Tanks. We did extensive research before we bought our 90,000-litre tank in Victoria and found that in addition to being manufactured in Australia, there are a number of unique features in Pioneer's tanks that simply aren't part of the construction of water tanks from other manufacturers," says Angela Doyle from Strathbogie, Victoria. "Given that they are competitively priced when compared to other brands, it made our purchasing decision a no-brainer. The delivery and installation by their professional agents was really efficient, and we are really pleased with the tank and its ability to preserve water quality. We wouldn't hesitate to buy from them again."

Property and business owners in need of water tanks may connect with Pioneer Water Tanks through their

website or by phone. They offer supply and installation of high quality water tanks for both rural and commercial purposes throughout Australia, and provide local customer support via their 50+ authorised dealers across the country. Interested parties may also visit their official Facebook page at <https://www.facebook.com/PioneerWaterTanks> to learn more about their latest news and important announcements.
