

Furnace Repair Edmonton Now Offers Services To St Albert

January 17, 2019

January 17, 2019 - PRESSADVANTAGE -

Furnace Repair Edmonton, based in Edmonton, Alberta, Canada, has announced that in addition to its previous service areas, it now offers heating, air conditioning and plumbing services to homeowners in St Albert. St Albert is a city located northwest of Edmonton and is the second biggest city in the Edmonton Metropolitan Area. Meanwhile, in a previous press release, the company had announced their expansion to Sherwood Park. Thus, the company now offers its services to Edmonton, Sherwood Park, and St Albert.

Bob Bies, CEO and general manager of Furnace Repair Edmonton, says, "We are very pleased to announce that we are now also serving the heating, air condition and plumbing needs of residents of St Albert. It was a logical next step in our expansion plans because St Albert is immediately northwest of Edmonton and it has grown into one of the biggest suburbs of Edmonton. As of 2016, it had a population of 65,589, which is likely to be much larger now."

Meanwhile, those who want to know more about Furnace Repair Edmonton or about HVAC repair can see latest posts of the company on Google. In one of these posts, they point out that they are ready to provide their services during emergencies. Furthermore, they are ready to solve problems involving furnace

installation. In another post, they urge homeowners not to delay in asking for furnace maintenance services.

Bob Bies points out that it is important for homeowners to understand how the furnace works. The oldest models used wood and coal as fuel. However, with advancements in technology, newer models now use gas, propane or electricity. These newer models have higher efficiency levels. But all types of furnaces work on the principle of forced air heating. Basically, the furnace heats the air and this heated air is sent to the living spaces through the ductwork by a blower fan.

Aside from heating, cooling and plumbing services, Furnace Repair Edmonton also offers help in maintaining a good indoor air quality. One way to ensure that the home has a healthy indoor air quality is by duct cleaning. While many homeowners often neglect the need to have the air ducts cleaned, these ducts can accumulate up to 40 pounds of dust, which can creep out slowly into the living areas. The steps in cleaning the ducts include using a suction hose on the furnace unit; cleaning the duct lining; sucking out through the returns; wiping down of vents and registers; cleaning the fans, motors and other components; and replacing the filters.

Furnace Repair Edmonton specializes in installing, maintaining, and repairing furnaces and other heating system. The company has been serving homeowners in Edmonton for five years and they have developed a reputation of being trustworthy and dependable. The company's services range from heating and air conditioning, master plumbing, water treatment, and provision of a client loyalty program.

Those who need more information about the services offered by Furnace Repair Edmonton can view their website or view Furnace Repair Edmonton on map. Meanwhile, the company has received many positive reviews, serving as proof of its dependable and trustworthy service.

For instance, Michelle from Edmonton said, "Furnace stopped working yesterday. So I called these guys at 8am this morning. Their repairman got here in about an hour so that was great. They checked the furnace and told me it had a burnt out circuit board. They went and got that from the factory and came back in about an hour. The repair guy was quite helpful and friendly."

Travis from Edmonton says, "My furnace wasn't responding to my thermostat (Lennox ? mid efficiency) which caused the house to become very cold. I called this company, 2 hours later I had a service member at my house (?Ryan?), he quickly diagnosed my problem (sensor needed to be taken out and cleaned and air filter needed to be replaced) and remedied it, along with educating me on the furnace and how it works, he also programmed my thermostat and charged me a very reasonable rate. I'd highly recommend them."
