

XP Labs Signs Fuel SVN Langley As New Dealer

January 17, 2019

January 17, 2019 -
Ontario, Canada based company, XP Labs, has announced the signing of a new dealer for their ISO XP New Zealand whey protein isolate. The company states that Fuel SVN Langley will now be offering their protein isolate to their own customers.

John Messenger, a spokesperson for XP Labs, says, ?Our grass-fed whey protein isolate is nutritionally better than similar products. This is because we obtain it only from cows that are fed grass as opposed to grain. Having FUEL SVN join is in helping to get this product out to consumers is a great honor and we are excited to see where this collaboration will take us.?

Messenger says that the nutrition company is now able to offer their products to their own customers. He states that given the nutritional benefits of the whey protein isolate from XP Labs, there have been a number of prominent nutritional companies that have chosen to offer it to their customers in the past few months. He states that XP Labs hopes that they will add even more vendors for their popular whey protein isolate in the very near future.

?We are always pleased to have a new dealer sign up with us,? says Messenger. ?This simply means that they believe in our product as much as we do and that they believe it in so much that they are thrilled to offer

it to their customers. We know how good it is and we are honored that others want to help us to get it out to the masses.?

Messenger states that the company recently signed another Canadian company, as well as others to also be dealers for the whey protein isolate. More on these dealers and their signing with XP Labs can be seen at https://www.pressadvantage.com/organization/xp-labs.

Messenger says that their whey protein isolate is superior to similar products because the dairy used for the whey comes only from grass-fed cows. These cows have never been given any filler chow, GMO foods or other feed that is manufactured in mass. Grass-fed whey is a much more nutritionally sound product and offers a wealth of benefits that are not found in whey that has been gained from cows that were fed certain grains or that were given hormones and other non-healthy foods.

Messenger continues that their whey protein isolate is superior because the ingredients used in its manufacture have never been exposed to any genetic modification. It includes stevia as a sweetener as opposed to sugar, which contains many more calories than stevia. He says that stevia offers its own long list of benefits over sugar and other sweeteners and states that it helps to give the product a wonderful taste that customers have come to love.

The product is currently offered for sale on the Amazon marketplace. Also on the marketplace are numerous reviews from customers that praise the whey protein isolate for its taste as well as its health benefits. Those who are interested in reading these reviews or in seeing more about the product, in general, can visit the official Amazon page at https://amzn.to/2srls5N.

Messenger states that they are pleased to have Fuel SVN on their team and that they look forward to adding even more nutritional product companies in the future. He states that those who are serious about their health, those who are looking to lose weight and gain muscle or anyone who has any questions about their whey protein isolate can contact XP Labs or learn more on their official website. The company states that their product continues to be one of the most highly appreciated whey protein isolates on the market and says that it is available to virtually anyone in the world, particularly given that they are regularly signing up new nutritional stores and websites to offer it to their customers. Those interested in learning more can visit XP Labs on their website or their official Amazon marketplace page.
