

Pest Control Services Expand Across Tampa

February 21, 2019

February 21, 2019 - PRESSADVANTAGE -

Tampa, FL based Tampa Brothers Pest Control is delighted to announce that they have extended their presence to serve more residents and businesses in the Tampa area. A company spokesman said, "We are proud that our customers consider us their preferred pest control company."

Florida, even with all the sunshine and great weather, still has a bad reputation when it comes to bugs—with some of the worst bug infestation problems across America—including ants, termites and cockroaches. Tampa pest problems are a particularly troublesome health issue because 37% of children are allergic to cockroaches; this is the main cause of kids' asthma in cities.

A Tampa Brothers Pest Control spokesperson said, "We want to make sure your home or business is 100% pest free. That is our goal, and that is the standard we hold ourselves to for every customer."

Tampa Brothers Pest Control is a leading pest control provider for residences, commercial properties, hotels, and restaurants who need specialist services, including fumigation and otherwise getting rid of rats, mice, squirrels, foxes, moles, bed bugs, cockroaches, ants, flies, fleas, wasps and termites. It serves customers across areas in and around Tampa and South Florida, including Safety Harbor, Oldsmar, Clearwater, Gibsonton, Apollo Beach, and more.

A company spokesman said, "We will make sure that your pest control problem is dealt with in the right way." All too often, other pest control companies will spray the area and give it a quick inspection before they leave for their next appointment. Tampa Brothers Pest Control, on the other hand, will find the source of the infestation, and deal with it once and for all.

Of all the pests in Florida, termites tend to be the ones homeowners dread the most. Florida has at least six invasive termite species which have been identified locally. Even though they are tiny, these wood-gobbling creatures cost homeowners billions in damages across America each year—and experts at the University of Florida estimate that half of the structures in Florida will be at risk of infestation by 2040.

However, as the harmful effect of synthetic pesticides on our environment and our health is becoming more apparent each year, Tampa Brothers Pest Control stay up to date with the latest options and organic pesticides that minimize harm the environment.

The Tampa pest control company works with local teams who have the experience to deal with every type of pest invasion, including rats and mice. Playing hide and seek with a rat for a couple of months can cause a population explosion as they can breed five times a year. With their litter sizes, up to 14 new sets of sharp teeth can appear to chomp through every hard surface regularly in order to survive.

Cockroaches, rats, and mice which come into contact with excrement in sewers and pet droppings can cause food poisoning and other diseases. Cockroaches are also believed to transmit disease-causing organisms such as staphylococcus spp., hepatitis virus, and coliform bacteria. As noted above, they are also a source of allergens, and a potential risk for those with asthma.

Molly M. gave this review: ?All I can say is thank you! I was at the end of my rope! My kids were itching and had a rash from the bug bites. All it took was one call to you, and you fixed our bed bug issue; more importantly, you helped us get our lives back to normal.?

Tampa Brothers Pest Control knows that any building in which food is prepared or stored needs to ensure that they have proper pest control in place, including schools, restaurants, hospitals, warehouses, offices and storage areas. However, some homeowners think all they need to do is to put out some traps or poison to control rats and other pests. ?We always recommend calling in professional pest control services when dealing with rats and mice, because it is important to remove and dispose of the carcasses properly, it is also important to clean up all traces of feces and urine,? said a company spokesperson.

Those looking for further information may contact Tampa Brothers Pest Control. More details regarding their services, and other contact information, can also be found on their website.
