

Swiss Quality Smile Now Offers Digital Dental X Rays In West Los Angeles

February 16, 2019

February 16, 2019 -
Swiss Quality Smile has announced that they now offer digital dental x-rays in West Los Angeles, California. This technology is known as digital radiography and makes use of digital x-ray sensors instead of the conventional photographic x-ray film. This results in improved computer images of teeth, gums, and other oral structures and conditions, and less exposure to radiation for the patient.

Dr. Ilona Casellini, DMD, from Swiss Quality Smile, says, ?We are very pleased to announce that we can now offer digital dental x-rays in West Los Angeles and nearby areas. This is the way of the future. This amazing new technology allows us to take x-rays with lower doses of radiation and clearer images. With a digital system it?s easier for us to keep track of your dental records and communicate between specialists.?

Swiss Quality Smile offers a range of dental treatments in Los Angeles. These include at home whitening, crowns and bridges, digital x-rays, dentures and partials, dental implants, hot towel service, intra oral photography, inlays and onlays, periodontal procedures, Invisalign® orthodontics, tooth colored fillings, teeth whitening, Zoom!® teeth whitening, and Swiss quality veneers.

Invisalign® makes use of modern technology for straightening teeth. It makes use of a custom-made series of aligners that are specifically made for a particular individual. These trays that are worn over teeth are made from smooth, comfortable and virtually invisible plastic material. By wearing them, the teeth are gently shifted into place, based on the exact movements that have been planned by the dentist for a specific individual. Unlike conventional braces, there are no metal brackets and there are no wires to tighten. A new set of aligners is provided every two weeks, until the appropriate alignment has been achieved.

Zoom!® teeth whitening also makes use of advanced technology to provide results in just one hour. It has longer lasting results and there is less fading. Teeth whitening is an important service provided by Swiss Quality Smile because stained teeth can negatively affect a person?s smile. At home whitening is also possible. Custom trays are provided by the dentist allowing the patient to apply whitening in the comfort of his or her home. Desired results can be attained within 7 to 14 days for 1 hour a day. For better results, in home whitening can be done in combination with in-office bleaching.

Another service provided by the Westwood cosmetic dentist are crowns and bridges. Crowns are usually required when a large cavity threatens the health of a particular tooth. Crowns totally cap or encircle the tooth or dental implant and are usually cemented on the tooth. Meanwhile, bridges are made up of several crowns that are soldered together to replace a missing tooth or support a weak tooth.

Dentures and partials are also provided. These are prosthetic devices to replace missing teeth. They are supported by the surrounding soft and hard tissues of the oral cavity. These are usually designed to be removable but there are many different designs that are available. Patients who visit the dental office would be able to see what design would be best suited for them.

And then there are the periodontal procedures. Routine teeth cleaning should be performed every three to six months, depending on the situation. Meanwhile, scaling and root planing is a periodontal procedure for patients with periodontal disease. It is usually performed with local anesthetic and provides a deeper cleaning.

Dr. Ilona Casellini, DMD, is a family dentist in Los Angeles who comes from a family of dentists and can trace her dental legacy back to 1910. She had worked with her parents, Irene and Renzo Casellini, owners of the premier dental laboratory Swiss Quality Dental Lab. Her parents had more than 40 years of experience working with thousands of dentists and this taught her cosmetic design and treatment planning. The said laboratory plays a special role in her practice. She works one on one with her patients and her lab to develop a treatment plan that would be best for the patient.

Those who require dental treatment, such as dental implants in West Los Angeles and neighboring areas, can visit their website or contact them by phone or email.
