

## **CDMG Launches New Website To Better Serve Customers**

*February 22, 2019*

Canonsburg, Pennsylvania - February 22, 2019 - PRESSADVANTAGE -

CDMG in Canonsburg, Pennsylvania, has announced the launch of their new corporate website. A representative for the company states that they have developed the new website to better serve their customers and their industrial construction and engineering needs.

Thomas M. Corry, a representative for the company says, "We are thrilled to have our new website up and running. Our customers now have around the clock access to our information, including our service industries, specific services and contact information."

Corry states that the company serves engineering, as well as project and construction management customers around the nation, and that customers may not always be able to contact them to gain general information about their services. He states that no matter where a customer is located and no matter what time of the day or night, the company is pleased that their customers can now get the information that they need. The company website includes an online contact form that customers can fill in with specific questions or needs and a representative from the company will contact them.

?This is one of the most exciting aspects of the site,? says Corry. ?The online contact form is going to help so many customers to get the attention that they need for their specific projects without having to wait until someone is in the office to answer the phone. They can simply fill in the form and we will contact them the very next business day. And, the site offers information for those who want to check out our location, as well.?

The company is a subsidiary of the STEVENS family of companies. The STEVENS company is one of the largest privately owned construction companies in the industry. Corry states that the company can provide design and management for projects from the very beginning to the completed project and that they work with customers to ensure that they receive the specific services that they want with on time delivery. The company works with customers to ensure that their budgets are met with quality and reliable services.

Corry says that the company works with a number of industries and a wide range of projects. Detailed information about each of these industries can be seen on the company?s new website. Corry adds that the company possesses the education, experience and knowledge needed to assist their customers with any project that they have in mind. They have worked with companies in the metals industry, as well as automotive, aerospace, and gas industries.

The company was founded in 1991, and is currently one of the foremost engineering companies that provide services to industrial and commercial customers. Located just 20 miles south of Pittsburgh, the company has a staff of experienced engineers and project management professionals to aid customers in reaching all of their project goals. Corry states that their goal is to always deliver their projects on time, within budget and to the highest possible level of quality. He says that it is these goals that have made them the go-to company in the nation for a number of industrial needs.

Those who are interested can learn more about the specific services that the company offers by visiting them on their newly designed website. Corry states that those who want to stay in the know can also visit them on their news page to be alerted of any new developments within the company. The website offers the online contact form as well as direct contact information for those who prefer to call or email the company for assistance. Corry states that they currently work with customers from all over the nation and states that those who are interested can visit them online to learn more about their core markets or to schedule a consultation to further discuss the company?s capabilities or any upcoming projects that customers may have. Corry states that an expert will be happy to contact any interested company with the information that they need.
