

Austin Vision Center Celebrates 15 Years Of Professional Vision Therapy

February 26, 2019

February 26, 2019 - PRESSADVANTAGE -

Texas based Austin Vision Therapy Center is pleased to announce that they are celebrating 15 years of professional vision therapy and eye care services with the local residents of Austin and its surrounding areas.

As noted on the company's website, the Austin Vision Therapy Center was established in 2004, with the mission of revolutionizing the lives of people looking for alternative solutions to conventional eye treatments, particularly those designed only to alleviate symptoms.

"We can proudly say that within the past 15 years, we have been constantly improving our methodologies so that more and more people can benefit from our services. Austin Vision Therapy Center is an outstanding choice if you are looking for the most practical vision therapy for your loved ones. Focusing on innovation and excellence, we provide our patients with comprehensive vision care that consistently exceeds expectations," said Dr. Denise Smith, founder of the Austin Vision Therapy Center.

Smith explained that the center offers a number of services which go beyond traditional treatment methods. She said that they pride themselves in offering the most comprehensive solutions targeted at treating delayed

vision development, poor visual efficiency, learning disabilities, strabismus and amblyopia, attention deficit disorders, and traumatic brain injuries.

Meanwhile, Smith added that there is a common misconception that vision therapy is just an "eye exercise", but she elaborated that it covers not only how well a patient sees, but also how they both perceive visual information and then react to it. "In fact, it is a clinically proven treatment program that is prescribed and supervised by an optometrist to improve someone's visual skills, increase visual efficiency, alleviate visual discomfort, and improve overall processing of visual information," she affirmed.

In addition, Smith advised parents to also take a closer look at their children and assess if they need more than just the traditional methods of eye treatment. While the use of eyeglasses and contact lenses are proven to solve a number of vision problems, there are some eye-related conditions that need to be addressed more thoroughly with the help of vision training or vision therapy. These conditions include crossed or wandering eyes, poor focusing, lazy eye, poor eye tracking, and even headaches caused by poor eyesight.

Furthermore, Smith encouraged those who have functional visual problems to schedule an appointment and visit the Austin Vision Therapy Center to properly diagnose and address their conditions. Aside from offering a complimentary consultation, the general public can also use a dedicated online service on the center's website to help them assess whether they might be experiencing any visual related problems.

One of their satisfied clients, Val M. said, "We had an amazing experience at the Austin Vision Center. Our son had a concussion and, after visiting a number of clinics and specialists (including child neurologists) we eventually had the opportunity to meet with Dr. Smith. She was amazingly thorough and was able to uncover several deficits affecting our son's vision, as well as his brain's ability to process what he was seeing. He had lost his peripheral vision but after many months of therapy, he was able to regain all of his sight and his brain's vision processing skills, which in turn improved his reading and academic skills, as well as his ability to participate in sports related activities. We can't thank them enough. They truly changed our son's life, and it was the best money we have ever spent that truly helped our son."

Meanwhile, Cavin B. said, "In 2011, I suffered a severe traumatic brain injury that left me with less than a 10% chance of survival. After 12 days in a coma, I woke up but was unable to eat, walk, or talk, and I had double vision. Through my rehabilitation, I had to relearn all of these faculties, and I am so thankful to Dr. Smith for helping me with my recovery to implement several different methods that encourage brain plasticity in a synergistic fashion. I highly recommend them."
