

Syscomm Ltd Offers Fully Integrated Enterprise Wireless Network Solutions

March 18, 2019

March 18, 2019 - PRESSADVANTAGE -

Coventry, UK based Syscomm Ltd is pleased to announce their new fully integrated enterprise wireless services, providing business internet services via a managed firewall on next-generation network infrastructure. The Internet of Things (IoT) is making radical changes when combined with Bring Your Own Device (BYOD), which creates exciting new smart digital business opportunities for many companies.

Wireless networks are a critical element of the enterprise infrastructure. In 2018, more devices were connected to Wireless Local Area Networks (WLAN) than to a wired Local Area Network (LAN). Every smart digital business needs to have their WLAN fully integrated with the wired LAN rather than utilised as a separate overlay.

Future proofing investment expenditure is a key consideration that companies need to maintain during the constant development of smart buildings, especially given their requirements for wireless communications. The user's demand for wireless ubiquity in everything from smartphones to tablets and laptops means that this will continue to be the fastest growing mode of communication. More importantly, it generates an average of 10 times the data traffic of other types of network usage.

Darren Bindert, a company spokesman stated that, "Syscomm owns and operate a high-performance UK wide network and Cloud infrastructure that sustains mission critical business Data, Cloud, Voice, and Application traffic for thousands of end users, 24/7." They offer a comprehensive range of IT services designed to deliver tangible business performance, encompassing business broadband solutions, wireless networks, cloud solutions, data centre facilities, network security, and IT and network support. More information regarding the full range of services offered can be found on the company's website at <http://www.syscomm.co.uk/>.

With online access becoming a dominant force for business, and as the end user's preference for mobile platforms continues to grow, many businesses struggle to find fast, reliable internet access that can withstand the peaks in demand internally. They often require a third party to provide a system of managed internet access which secures their assets. The loss of internet access, or poorly performing wireless and internet services, can have a financial impact for most businesses today.

The business world is changing more and evolving faster today than at any other time in history. In order to survive, businesses must start preparing for the changes that are coming and, at the same time, increase efficiency, reduce costs, improve collaboration, and expand their reach. Much of this will be achieved by exploiting wireless communications and network technology.

Syscomm Ltd is strategically placed to help clients both across the UK and abroad with fully managed IT and communications services. They provide managed internet services, deliver reliable high-performance connectivity guaranteed by a comprehensive 24/7 Service Level Agreement, and deliver the ultimate standard in performance and reliability at a reasonable cost.

Syscomm Ltd's solutions allow customers to obtain the bandwidth needed to get started, while retaining the freedom to scale performance when required. Many small businesses rely upon external support to help them grow and, rather than expand their non-production staff, have a firm that can support multi-site networks alongside the latest developments in smart buildings and property development.

Tom Carter, Network Manager for the Blue Coat Church of England School, provided this review for Syscomm Ltd: "Based on my experience with Syscomm, my advice to any school or business looking at how best to improve their network is simple: contact Syscomm. They know what they are doing, and they care about what they are doing. Internet connectivity is key to any school or business, and with Syscomm as an Internet Service Provider (ISP), it's a relief knowing I can sleep at night and don't have to worry about things."

Syscomm Ltd, a leading full service ISP, was established in 1984. It provides premier outsourced IT support,

network consultancy, Wide Area Network (WAN) and cloud computing services to UK businesses, helping them harness the strategic business benefits brought by enterprise-class technology solutions. It is headquartered in Coventry and operates six data centres around the UK.
