

Texas Foundation Pros Expands Concrete Foundation Repair Service In Allen TX

March 11, 2019

March 11, 2019 - PRESSADVANTAGE -

Texas Foundation Pros has announced that they are expanding their concrete foundation repair services to now include home and business owners in and around the Allen, Texas area. The company states that they provide residential and commercial customers with free estimates for slab foundation repairs, as well as pier and beam repairs. More on their complete list of services can be seen at <https://txfoundationpros75002.business.site>.

Gregory Freeman is a spokesperson for the company. Freeman says, "We are pleased to now be offering our full range of concrete foundation repairs to customers in the Allen area. Our skilled and professional technicians can provide customers with evaluations that help them to determine the specific level of damage that has been done and to instruct them on what we can do to solve those issues."

Freeman states that there are many things that can cause damage to the foundation of a home or business. He says that the age of the foundation is often the number one indicator of whether or not damage has been done. Concrete foundations can crack over the years, causing issues with the structure itself if those damages are not found and repaired. Water and extreme heat can also contribute to the state of a concrete

foundation, and Freeman states that structures in certain areas of Texas often succumb to the extreme heat that is evident during the summer months.

“Summers in Allen are hot,” Freeman explains. “When this extreme heat is coupled with rain, which is also common in this area, foundations can suffer. Years of these extreme weather conditions can cause small cracks in any foundation, and those small cracks can lead to larger cracks and even breaks in the concrete. Leaving these cracks in the foundation only makes them worse. After just a year or two, the damage could be substantial.”

Freeman states that the company can evaluate the foundation of any home or business to check for this type of damage. Those interested in seeing the company’s full range of service areas can visit them online at <https://goo.gl/maps/FoRpjbQf5R72>. Freeman adds that structures that have not had their foundations inspected for several years are at risk for damage. When foundation damage is evident but left unrepaired, he states that it could cause the structure itself to become unsafe. Cracked or broken foundations can cause an entire home or business to ultimately fall.

Freeman adds that there are signs to look for that can help to determine if there is foundation damage. He states that any home or business owner who has noticed sloping floors, doors or windows not closing or opening properly, or higher energy bills could have foundation damage.

“Higher energy bills are due to floors that have produced gaps that allow outside air into the structure,” Freeman explains. “When foundations begin to sag, floors may gap. The space between the floor and the foundation could leave a significant gap that allows hot or cold air inside, which would in turn cause heating and air conditioning units to work overtime to stabilize that indoor air. This leads to higher energy bills.”

Freeman states that a simple evaluation of the structure could determine if there is an issue with the foundation. He says that if an issue is found, Texas Foundation Pros can repair the foundation, making the structure safe once again and saving owners substantial amounts of money as they lower energy bills and avoid what could be very costly repairs to the structure itself if the foundation is not repaired properly.

Those who are interested in learning more about the full range of concrete foundation repair services that the company is now offering to Allen, Texas residents and business owners can visit them online at <https://www.pressadvantage.com/organization/texas-foundation-pros-allen>.
