

Panama City Damage Restoration Team Performs 3-Phase Process of Controlled Removal and Mold Remediation

March 08, 2019

March 08, 2019 -

Panama City, Fla. - The research is in. Mold and indoor contaminants can cause serious health problems. One of the top providers of Panama City damage restoration is performing a 3-phase process of controlled removal and remediation of mold in the local area.

Of the 21.8 million people reported to have asthma in the U.S., approximately 4.6 million cases are estimated to be attributable to dampness and mold exposure in the home. Additionally, with the recent bouts of severe weather in the Gulf Coast area, mold spores are ever present. A mold inspection is the first step in ensuring the safety of a business or residential home from the dangerous effects of mold.

What stands out about the services provided by the Panama City emergency response providers is thier intensive 3-phase process. First, a third party comes into the home and conducts air quality testing. The results of this test will allow the business to devise a plan to attack the mold issue. They then start the cleaning and mold removal process. Once the cleaning is done, it is then retested by the third party. If the cleaning passes the test, then the client can move on to reconstruction.

Disaster Response Team is a full-service restoration company that helps residential and commercial customers of Panama City restore their properties after disasters of all kinds. Those interested in damage restoration can visit www.drt911.com or call (850) 763-4378 for further details.
