

Boston Enterprises Releases Garage Door Replacement Cable Set To The Market

July 22, 2015

July 22, 2015 - PRESSADVANTAGE -

Central Illinois based company, Boston Enterprises, has released their garage door replacement cable set to the market, which is designed for even the novice DIY customers. The company believes that the first step in a replacement effort is finding a high quality cable such as the one they sell through their online sales channel at <http://www.ibourl.net/cable>. This product is currently available for \$19.99 and offers two 3/32" x 13' long and two 1/8" x 14' galvanized aircraft cables along with 10 fasteners to secure the cables in different applications. Having two pairs of extra long cables in two diameters gives numerous options for repairing many sizes of doors. The many different fasteners make it easy to replace cables on torsion spring and extension spring garage doors. These 1/8' cables with 7 x 19 strand is rated at 1050 pounds and will work on a torsion spring door up to 12' 6" tall or an extension spring door up to 9' tall. Another small but important thing is that these cables are fusion cut to prevent fraying at the ends which keeps the small cable wires from pricking the installers fingers.

Safety cables should always be installed through the extension springs in case of a spring or cable failure in the future and the pair of 3/32" cables are ideal for that purpose.

Safety First, spring cables have enough tension on them to lift the weight of the door that they are attached to. Once the cables are on hand, Boston Enterprises suggests that homeowners locate the owner's manual for the garage door. Instructions on replacing the cables should be available through this manual.

When purchasing the garage door replacement cable Boston Enterprises encourages homeowners to read reviews on products before purchasing. The company's own replacement cables currently hold a positive ranking with a number of encouraging reviews which can be viewed online at http://www.amazon.com/review/R1GJS8BFFHI4FO/ref=cm_cr_dp_title?ie=UTF8&ASIN=B00WBQU7BS&channel=detail-glance&nodeID=228013&store=hi. One satisfied customer said, "There are S hooks, cable clamps, adjusting clips in the kit also to give you versatility. With two sets of cable, you can even run safety restraint cables through the stretch springs. I was impressed that there was plenty of cable and the right parts to make it convenient and easy for anyone to replace their garage door cables regardless of size and type of springs. Thank you for having this cable replacement kit available!"

The company invites all consumers who enjoy their products and DIY instructions to visit their online sales channel and leave their own feedback.
