

# Dental Implants In Andover Hampshire UK Offered By Dental Concepts

*April 23, 2019*

April 23, 2019 -

Dental Concepts has announced that they are offering private cosmetic dental treatments, including simple and full mouth dental implant treatment, in Andover, Hampshire, UK. Dental implants provide a permanent solution to missing teeth. Essentially, a dental implant serves as a substitute for a natural root and is usually shaped like a cylinder or screw. Each implant is put into a socket that is drilled at the exact location for an intended tooth. More information about their dental implant treatments can be found at https://www.dental-concepts.com/dental-implant-treatments-andover-whitchurch-hampshire/.

Dr. Manish Chitnis from Dental Concepts says, ?There is nothing more beautiful than a healthy straight smile that has been well looked after. An area within dentistry, known as cosmetic dentistry, focuses on giving patients not only a fully functioning smile but also an attractive one that you will be proud to wear. Here at Dental Concepts our clinical team is trained to deliver numerous cosmetic dentistry treatments, giving you a

wide range of choices for getting the smile you always wanted. These treatments are designed to enhance your smile with materials and techniques that will make the final outcome look natural and in tune with the rest of your teeth and the proportions of your face.?

There are a number of benefits from having dental implants. First of all, when people lose their natural teeth, the jaw bone and the surrounding tissues will begin to resorb or disappear over time. When implants are put in the jaw, they stimulate the remaining bone to grow and mesh around the implanted metal along with tiny blood vessels. Furthermore, dental implants are natural looking and it is very difficult to differentiate the implant from a natural tooth. The dental implants also restore function so that the patient is able to eat, chew and bite food as normal.

Other cosmetic dentistry treatments at Dental Concepts include teeth whitening, dental porcelain veneers, white fillings, gum contouring and teeth reshaping, smile makeovers, and UV teeth whitening. Teeth whitening is a simple method of lightening the colour of the teeth, which has been stained by foods and drinks. The degree of whiteness that will be attained will depend on the patient and with the type of bleaching process that is used.

Dental porcelain veneers are for those who have their front teeth chipped, stained or misaligned. The veneers will provide a good life-like appearance with minimal tooth adjustment. Veneers make the teeth look natural and healthy. They are very thin and they are put in place by a strong adhesive.

Meanwhile, since dental treatments have a substantial impact on a person?s health, it is always a good idea to check on a dental practice first before going to them for treatment. One way to do that is by checking with the General Dental Council. By visiting their website, patients can get important information about dental practioners and also about the standards of care in dentistry in UK.

Another good way to determine whether a dental practice is really worth going to is to read the reviews left by previous patients. For instance, Aleric W. gave the practice a five star rating and said, ?The entire practice is highly professional from the welcome you get at reception to the care I received from Manish. My treatment was carried out with a quiet authority and I was kept up to date on what was happening at all times. I would highly recommend Dental Concepts.?

Another patient, Fiona P., also gave the dental practice five stars and said, ?Like many people I have never found the idea of going to the dentist particularly good, however I really have no problems now. The receptionists are always polite and friendly, and my dentist is so friendly and helps me relax so much.?
