

RFID Signal Safe Launches Two New Styles Of Men's Wallets

August 04, 2015

August 04, 2015 - PRESSADVANTAGE -

RFID Signal Safe has recently announced the addition of new products to their men's wallet line. The launch includes two styles, including a crocodile wallet. This particular company provides wallets and money clips that have security features, specifically RFID blocking capabilities.

Nick Cocchiola released a statement about the new products saying, "We've been working to add to our product line and these two wallets are the first of many products that will be coming in the future. They are RFID block enabled, which will help to protect customers from identity theft."

The men's wallets are made from genuine, handmade leather and crocodile leather, and each contains RFID blocking material that will stop thieves from retrieving the RFID signals on credit cards. The crocodile wallet contains soft leather fabric on the inside to further protect cards from scratches.

RFID Signal Safe's bi-fold wallets contain six RFID credit card protector pockets as well as two pockets for cash. They also produce money clips that contain six RFID credit card protectors and a clip for cash.

Police departments often urge consumers to do more to protect their identities. "We see so many cases of identity theft that could potentially be prevented if consumers were just a bit more aware of how thieves steal their information," says police detective William Mayberry.

The product line is designed to deter thieves by blocking RFID signals from credit cards, and giving consumers a stylish way to carry cards and cash. Thieves typically have devices, normally within smartphones, that enable them to retrieve the RFID signal from credit cards, even while those cards are safely hidden away in a wallet. RFID blocking technology stops thieves from being able to retrieve the signal, thus eliminating the worry of identity theft.

"They're a great thing to have," says William Mayberry. "People need to do whatever they can to stop thieves from getting this information, and a wallet that has blocking technology is just the thing to do that."

The two newest wallets in the company's RFID blocking lineup are currently available on RFID Signal Safe's official website, as well as on the Amazon marketplace.
