

TNSC Ltd Offers School ICT Services

May 08, 2019

May 08, 2019 - PRESSADVANTAGE -

TNSC Ltd, based in Farnham, Surrey, UK, has announced that they are offering new tailored information and communications technology (ICT) support for schools. They want to point out that they are ready to offer ICT support, from sourcing and installing the appropriate software to maintaining the school's Internet connectivity. They offer 24/7 support and ICT equipment for schools, providing everything that is needed for complete ICT infrastructure management. More information about these services can be gleaned at <https://www.tnsc.co.uk/ict-support-for-schools>.

Vicki Watson, a representative for TNSC Ltd, explains, "We offer wide-reaching ICT services for schools rather than catering to only one specific area of the education sector. This is because we believe every school should have access to support they can depend on, regardless of their status, size or budget."

Vicki Watson points out that there have been very little changes in their team. This implies that clients will be working with the same IT specialists for the years to come, allowing them to get to know the team members well and the team members to really understand the kinds of ICT systems that the school requires.

Meanwhile, the team members at TNSC Ltd have the knowledge and experience to provide the kind of ICT support that is needed by primary schools, secondary schools, and higher education institutions that will both

be cost-effective and reliable. Before undertaking a project, the team will talk with the client regarding their budget so that they can find the appropriate equipment and software that the school can afford.

TNSC Ltd has worked with both independent and state schools and colleges, customizing their services in order to be appropriate for each particular school's needs and goals.

One example of the ICT support service they have provided was for a grammar school with 100 users in the South of England. TNSC Ltd was asked to first conduct an audit of the school's current network as the school administrators were becoming increasingly concerned about the cost and performance of their internal IT team.

The audit indeed confirmed that the IT system of the school has been going downhill for some time already and there were a number of issues that needed to be addressed immediately. As a result, a decision was made to outsource the IT management of the school. The team analysed the IT workload to find out which of the admin tasks can be better handled by non-IT staff. This resulted in a decrease in the IT workload and the massive streamlining of the admin tasks and related processes. The company negotiated for a 40 percent reduction in Internet charges and they were able to accomplish the goal of reducing the costs while improving performance.

Another case study of past projects involves a state secondary school with 45 users. For this school, the network manager had just resigned and the school was saddled with very old and unreliable systems and there was a serious lack in available funds. For this school, TNSC Ltd had to source out some second-hand equipment. After configuring the servers, they deployed a free web-based helpdesk and asset monitoring/management system, and then negotiated a better price for the school's Internet lines and eliminated several external third party services they were barely using. And finally, they recruited a full-time internal support engineer on a very limited budget. The result was that they accomplished the goal of having a reliable system on a limited budget.

Meanwhile, aside from ICT support and outsourcing services, TNSC Ltd also provides cloud computing and hosted services. Vicki Watson explains, "By transferring your data and applications into the cloud, you're maximising your security against common risks such as internet failures, theft and fire so you have less to worry about. We can help you get set up in the cloud and show you how to use it to its full potential."

TNSC Ltd was established in 2001 with the mission of offering high quality ICT support for businesses across all kinds of industries and sizes. Since 2001, they have already worked with several SMEs across a range of sectors, including schools, banks, NHS trusts, and multinational corporates. They offer both on-site and outsourced support.
