

Summerlin Carpet Cleaning Reveals the Good and Bad Between Bonnet Buffing and Steam Cleaning

May 03, 2019

May 03, 2019 - PRESSADVANTAGE -

Summerlin Carpet Cleaning is a renowned, locally owned carpet cleaning service based in Summerlin, a part of Las Vegas. In recent news, the company has revealed why it is so necessary to have carpets cleaned properly.

According to Summerlin Carpet Cleaning, who are the leading experts behind the company's success notes: "The amount of bacterium that most carpets contain are around at least 4000 times more as those which are located in the toilets. This shows how important it is to have your carpets cleaned effectively."

However, there has been a recent debate on which of these two cleaning techniques can provide results as per the above mentioned issue: Bonnet Buffing or Steam Cleaning.

A spokesman for Summerlin Carpet Cleaning reveals that Bonnet Buffing is a easy method that came long before Steam Cleaning became popular. This method uses an absorbent pad that can be attached under a floor machine and it buffs the carpet. Though this may sound fast and effortless to use, it is not recommended for residential carpets as it can damage them and fails to deep clean. The method only cleans the surface of

the carpet.

Steam Extraction Cleaning in this case is considered more useful and effective. This method uses hot steam which in turn destroys any bacteria as well as contaminants like pollen and then extracts the dirt from the carpet, leaving the carpet far cleaner than bonnet buffing.

Summerlin Carpet Cleaning has over 20 years of industry experience and as such, is more capable of handling all sorts of carpet cleaning tasks. For more information, visit their website now at <https://summerlin-carpet.business.site/>.
