Twin Cities PC Repair Offers Assistance On Business Software Installation

May 13, 2019

May 13, 2019 -

Twin Cities PC Repair, based in Eagan, Minnesota, has announced that they are offering assistance to businesses on the installation of software. They would like to point out that computer software is a critical component of practically every small business today but the problem is that business owners will tend to have no time for the installation and setup of software in view of their need to handle actual business pursuits.

Patrick Jensen, owner of Twin Cities PC Repair, says, ?We are very pleased to announce that one of our computer services is the installation of software for businesses. Thus, aside from our standard computer repair services, we also install business software. Just send us an an email or contact use on the phone if you are about to install a particular software and you don?t have the in-house capability nor the time to study the various aspects of the software and then install it.?

When business software is installed, it means that the installer program will work in the background putting in new files into the system, creating new entries into the registry, and possibly download new files from the Internet that are required by the new system. With experienced software installers, the team from Twin Cities PC Repair has the skills and the knowledge to get the new software installed properly into the computer

system. With this service, a small business would be able to rest assured that the new business software will be working properly.

The primary service offered by Twin Cities PC Repair is, of course, troubleshooting and repair of computers. When it comes to minor problems, perhaps an in-house team of computer technicians would be able to do the task but when the problem is more difficult and more complex than expected, it may be time to call in the experts at Twin Cities PC Repair.

In relation to PC or computer problems is the presence of malware in the computer system. It may be that the computer is malfunctioning because of the presence of a computer virus or malware. According to Patrick Jensen, malware and viruses are a major cause of computers running slow and it requires someone with experience in removing them to get rid of them and make the computer run efficiently and fast again.

Patrick Jensen explains that they have many years of experience in troubleshooting and repairing computers from all major manufacturers. He suggests that computer owners contact them when they notice that their system is running slow or there are popup ads appearing on the screen. He points out that their technicians are experienced in getting the computers restored to their original state.

In line with the above, another service that the company can provide is the management of antivirus software and installation of patches. Their service includes full-use licenses of top antivirus software like Malwarebytes Pro and Webroot Secure Anywhere. And with LogMeIn remote desktop, clients may also be able to access their PC from anywhere.

The technicians from Twin Cities PC Repair are also experts in wireless networking. Thus, they can help solve wireless inter-connectivity problems within the home or the small business office.

Furthermore, Twin Cities PC Repair technicians can help with data backup and recovery. Whether it is Cloud storage or local storage, they have the knowledge and the experience in setting up a backup and recovery system for the home or business. This ensures that most data will not be lost when the system crashes or the computer storage fails.

Twin Cities PC Repair provides a number of services aside from software installation and computer repair. They are also able to offer their services for the removal of malware, spyware, viruses, and rootkits. They can also take care of any operating system issues that a business or an individual has with a computer system. They can also give advice and some tips to businesses and individuals on how to prevent the computer system from getting infected with malware.

Those who need more information regarding the services provided by Twin Cities PC Repair can visit their

website or contact them by email or by phone.
