

DieselPower® Releases Information On The Benefits Of Tuning Parts And Performance Chip Installation For VW Golf TDI

July 23, 2015

July 23, 2015 - PRESSADVANTAGE -

Canada's DieselPower®, an auto solutions company based in British Columbia, recently released new information on VW Golf TDI performance chip tuning. As such they have invited car owners to experience the many benefits of using DieselPower® technology designed to enhance auto performance and overall driving experience for new diesel vehicles equipped with computer-controlled injection systems. Vehicle models who employ this type of system into their vehicles include the Volkswagen Golf TDI, among many other car make and models.

DieselPower® has been providing tuning modules for diesel-operated vehicles in the North Americas for years. These tuning modules are designed to increase overall horsepower and torque while still maintaining and increasing fuel technology. Company spokesperson Joe Hafner explains: "DieselPower® is one of the most popular diesel performance products for diesel vehicles in North America. With the tuning module installed, diesel vehicles will enjoy upwards of 25% more torque and horsepower."

Tuning modules are above-par when compared to chip tuning. Joe Hafner warns, "Chip tuning enthusiasts on

VW TDI forums like TDI Club and VW Vortex promote the benefits of chip tuning but consumers looking for performance upgrades on their VW TDI vehicles may not fully comprehend the repercussions of this process. Chip tuning uses an invasive process that requires cutting tamper-proof security bolts. In addition, owners of VW Golf TDI will also need to ship their ECUs to chiptuners for flashing, making their cars inaccessible for a period of time. The whole chip tuning process voids manufacturer's warranty. On the other hand, DieselPower's tuning modules guarantee easy removal and installation, as well as a non-invasive installation process. Overall, it increases torque and horsepower, and improves fuel efficiency without voiding manufacturer warranty.

Positive feedback from VW Golf TDI owners are pouring in?the company's website receives testimonials from satisfied customers frequently. Russ wrote: "I installed the VW Golf TDI performance tuning parts by DieselPower®. Their Active CR 12 diesel module for the 2015 VW Golf, Jetta, and Passat provides a healthy boost in both HP and TQ. This module adjusts fuel timing across the RPM band and makes the car more responsive to throttle input. As a performance oriented driver, good aftermarket support is important to me, and Joe Hafner and the guys at DieselPower deliver it in spades."
