

AG Belting Outlet Offers New Inventory of Rolled Conveyor Belting at Lower Than Industry Standard Rates

July 14, 2015

July 14, 2015 - PRESSADVANTAGE -

AG Belting Outlet, a company based out of the heartland of America in Kansas, is revealing a new line of conveyor belting at below standard pricing in order to bolster the economy to help commercial and industrial companies find the belting they need at affordable rates. This is one of AG Belting Outlet's boldest initiatives to date in order to do their part to further both their own company growth and those of their industrial and commercial clients.

Although the AG Belting Outlet continues to be a leader in the Agricultural Belting (Baler Belting) arena, the owner, Steve Stitt, was recently able to negotiate a deal with manufacturers to bring in brand new rolled conveyor belting in and offer it to commercial and industrial companies throughout the US with individualized customer service and fast shipping.

"The heart of our company is to be able to help people, from farmers to industrial companies, by offering OEM specified or higher products at outstanding savings and in many cases faster than they can get them locally. It's a win, win for everyone when you focus on looking out for the well-being of your customer," says

Mr. Stitt.

Whereas round baler belting or AG belting is mainly used for farming balers and usually comprised of 3-ply PVC or rubber ranging in many different dimensions and sizes depending on the manufacturers, such as John Deere, Hesston AFGO, Ford, New Holland, Vermeer, and New Idea, the new line of conveyor belting they are introducing is used primarily in commercial and industrial settings, allowing them to help an entirely new group of businesses and people.

Conveyor belting is traditionally used by companies working on everything from road development and re-pavement to those working in stone quarries or running shipping facilities. Conveyor belting systems are generally broken into two types of categories; general material handling and bulk material handling. While the general material handling category covers most light duty horizontal or vertical (diagonal) movement, such as warehouse uses, the bulk material handling covers more of the industrial heavy duty use, such as road work or stone quarry work.

AG Belting Outlet states that the new conveyor belting they are now carrying is ideal for the bulk material handling of industrial companies although they have other belting for general material handling as well. They also have staff that is available to answer any questions a client has regarding sizing, compatibility, usage, shipping, or ordering of new conveyor belting.

Due to the nature of the deal Mr. Stitt was able to work out with the manufacturers, they are currently providing the belting through the end of summer and will determine at that point whether or not to continue with the deal beyond that point. For those in the industrial conveyor belting world, it would be a great opportunity to look into.

The new belting includes over 15 sizes all in 1000 foot rolls. AG Belting Outlet encourages those interested in learning more about the new conveyor belting or their other baler belting products to contact them through their website at AGbeltingoutlet.com.
