

Kansas City Tree Service Company Launches New Website

May 21, 2019

May 21, 2019 - PRESSADVANTAGE -

Kansas City Tree Service Company has announced the launch of their new website. They offer licensed and certified local tree services for Kansas City, Missouri, and neighboring areas. They provide assistance to homeowners and property owners with regards to emergency tree services, whether trees need to be trimmed or pruned or tree stumps have to be removed. They can also offer services when it comes to taking care of tree health. More information about this can be gleaned from their new site.

Paul Smothers, spokesperson for Kansas City Tree Service Company, says, "We are so excited to announce that we have launched our new website. This new site allows people to understand better the services that we provide for homes and commercial establishments in Kansas City and surrounding areas. Whether doing it for landscaping, aesthetic, functional, or emergency reasons, there is a lot to consider for proper removal of trees. We are leading tree experts and know how to properly remove your tree while keeping the rest of your property intact and looking great."

They are a full service tree care company. Their services include tree removal, tree lopping, tree trimming and pruning, cabling and bracing, stump grinding, stump removal, tree fertilization, and lot and land clearing.

Sometimes tree removal presents some challenges such as when the trees are located in hard to reach places. This is where their expertise and equipment will come in handy. They may need to use a combination of tree climbers, cranes, bucket trucks, and other techniques and equipment to get the job done properly. Nevertheless, they point out that they will do whatever it would take to perform the task safely and responsibly.

When it comes to tree trimming and pruning, this is a service that has to be done regularly. The goal is to cut off those parts of the trees that are dead, diseased, unwanted or non-producing. Or it could be that some branches of a tree have protruded to the street and are touching or almost touching electric lines. These branches need to be removed to avoid the risk of these branches hitting the electric lines and possibly cause a brown out.

Regular pruning is also needed in order to improve tree health and stimulate proper growth. For this kind of service, homeowners and property owners may be tempted to do the trimming or pruning themselves. However, the professionals at Kansas City Tree Service Company would like to warn people to always consult with a tree professional because improperly done trimming can cause damage to the trees and trimming and pruning trees is actually a dangerous task that must be left to the professionals.

Meanwhile, tree stumps in the yard can be dangerous. They can present hazards to children playing in the yard and they can also contain insects, pests, parasites, fungi and bacteria that can contaminate other trees and plants in the yard. Furthermore, lawn care is much more difficult because the stumps are obstacles to lawn mowers and other equipment. Using an industrial stump grinding machine, experts from Kansas City Tree Service Company can easily eliminate those stumps, while providing the homeowner or property owner with some free mulch that can be used in the garden.

Still another service offered by Kansas City Tree Service Company has to do with tree health and fertilization. This is important for those who have noticed that their trees and plants look sickly because of some infection or because of pests. The tree experts from the company are able to identify the pests that are present and provide the needed pest extermination. They can also provide the appropriate tree fertilization, which will make sure that the trees get the nutrients that they need for growth and for fighting infection from bacteria and viruses.

Kansas City Tree Service Company is a locally owned and operated business in Kansas City, proving tree services for a number of years. Those who are interested in their services can visit their site at <https://kansas-city-tree.com> or contact them by phone or by email.
