

# **Implant Centre Martinko Provides Life-Changing Dental Implants**

*June 17, 2019*

June 17, 2019 - PRESSADVANTAGE -

Trieste, Italy based Implant Centre Martinko is pleased to invite members of the public to avail themselves of the dental clinic's innovative and life-changing dental implants.

Dr. Damir Martinko of Implant Centre Martinko is a renowned dentist who owns and operates the practice. He states that his primary goal is to ensure that the clinic's patients always get the treatment that they need at affordable prices. He believes that everyone has the right to be comfortable with their own smile, and that they should be able to functionally use their mouths in everyday situations, such as forming clear speech and consuming food without any impediment.

He explains that every person, whether they realise it or not, requires healthy teeth. Given that a combination of poor hygiene and care, various types of trauma, gum disease, and even natural ageing can contribute to the decay or loss of teeth, the clinic often takes up the mission of spreading awareness regarding oral health. To help accomplish this, they try to answer questions from their community regarding the value of dental implants, and how they can be used to remedy situations where one or more teeth appear to be beyond any help.

The Implant Centre Martinko, as the name suggests, offers a variety of dental implants that are capable of fixing a wide variety of dental issues. They state through their website that, "The dental implant is an artificial substitute for the tooth. The titanium anchor, of which the dental implant consists, is incorporated in the maxillary or mandibular bone in place of the lost tooth, so that it functions as a true natural tooth." Conveniently, the tough materials used in the construction of dental implants mean that they are a solution that practically last a lifetime for the patients who rely on them.

However, Implant Centre Martinko warns that implants should not be taken for granted. They state, "Oral hygiene in standard and mini dental implants is extremely important" as are regular dental checks. If the patient respects the hygienic rules and follows their dentist's advice, the dental implant is a permanent solution that lasts, in most cases, for life. For all these reasons, a growing number of patients today are opting to replace one or more teeth with dental implants."

There are a number of advantages afforded to patients who elect to receive dental implants. Aside from restoring functionality and rebuilding a patient's smile, the implants utilised by Implant Centre Martinko are all biocompatible, which means that they do not cause unwanted reactions or side effects when inserted. Furthermore, bone loss is reduced once they are fitted, and the neighbouring teeth remain intact as well. As a bonus, patients will be glad to know that the recovery period is often no longer than 24 hours. Within a day of insertion, a patient can rely on their implants to let them chew solid food without fear of irritating the gums or causing any inflammation. In short, receiving an implant often directly changes a patient's life for the better almost immediately following their procedure.

Implant Centre Martinko offers a variety of implant surgeries. These include a tooth on implant, bridge on installations, circular bridge on implants, and so on. Notably, the clinic is also equipped to perform bone graft operations and maxillary sinus elevation if required, in addition to popular implant techniques such as All-on-4 and All-on-6, Proarch, and Dentition 3.0.

Prior to surgery, a stringent round of tests is performed by the clinic to evaluate whether a patient is eligible for a given implant. As dental conditions vary from patient to patient, the clinic takes an individualised approach to their treatment. Implant Centre Martinko affirms that, "The individual approach is extremely important to us because each patient is different, both in their state of dental health and in their general state of health. Although patients sometimes have a very similar dental situation, which could result in similar dental therapy, our implant centre takes particular care of the aesthetic desires and needs of the patients."

Those who wish to learn more about the procedures, or schedule an appointment with the clinic, may contact Dr. Damir Martinko of Implant Centre Martinko.
